Research data @ UiT

Ebola outbreak 2013-2016 in Guinea, spreading to Liberia and Sierra Leone.

Declared an international crisis by WHO.

Over 28 000 reported cases, more than 11 000 deaths.

No established treatment, no vaccine.

(Tønjum & Olsen, 2018)

“We urge researchers working on outbreaks to embrace a **culture of openness.**”

“In an **increasingly connected world** [...] with new ways to collect clinical and epidemiological data, could transform our response to outbreaks.”

”[T]he **power** of these potentially massive data sets to combat epidemics will be realized only if the data are **shared as widely and as quickly as possible.**”

(Yozwiak et al., 2015, bolding ours)

SAMUEL R. BRONK/SANZOS

Nurses at the Kenema hospital in Sierra Leone, which contributed data to early efforts to sequence the genome of the Ebola virus from the West Africa outbreak.

Make outbreak research open access

Establish principles for rapid and responsible data sharing in epidemics, urge Nathan L. Yozwiak, Stephen F. Schaffner and Pardis C. Sabeti.

Last April, five months into the largest Ebola outbreak in history, an international group of research-

sequenced 99 more Ebola genomes, from patients at the Kenema Government Hospital in Sierra Leone.

front lines and in immediate danger; some later died. We were amazed by the surge of collaboration that followed. Numerous

The UiT strategy

- UiT will be in the **national forefront in Open Science** and our research data and publications will be openly available when possible.
- UiT will be recognized by a culture for **active dissemination through open channels for publishing**, as well as through exhibitions, journals and the media.
- UiT will ensure the **efficiency and quality of its support services** through continuous improvement processes with a broad level of involvement.

Outline

Research Data Management (RDM) services at UiT

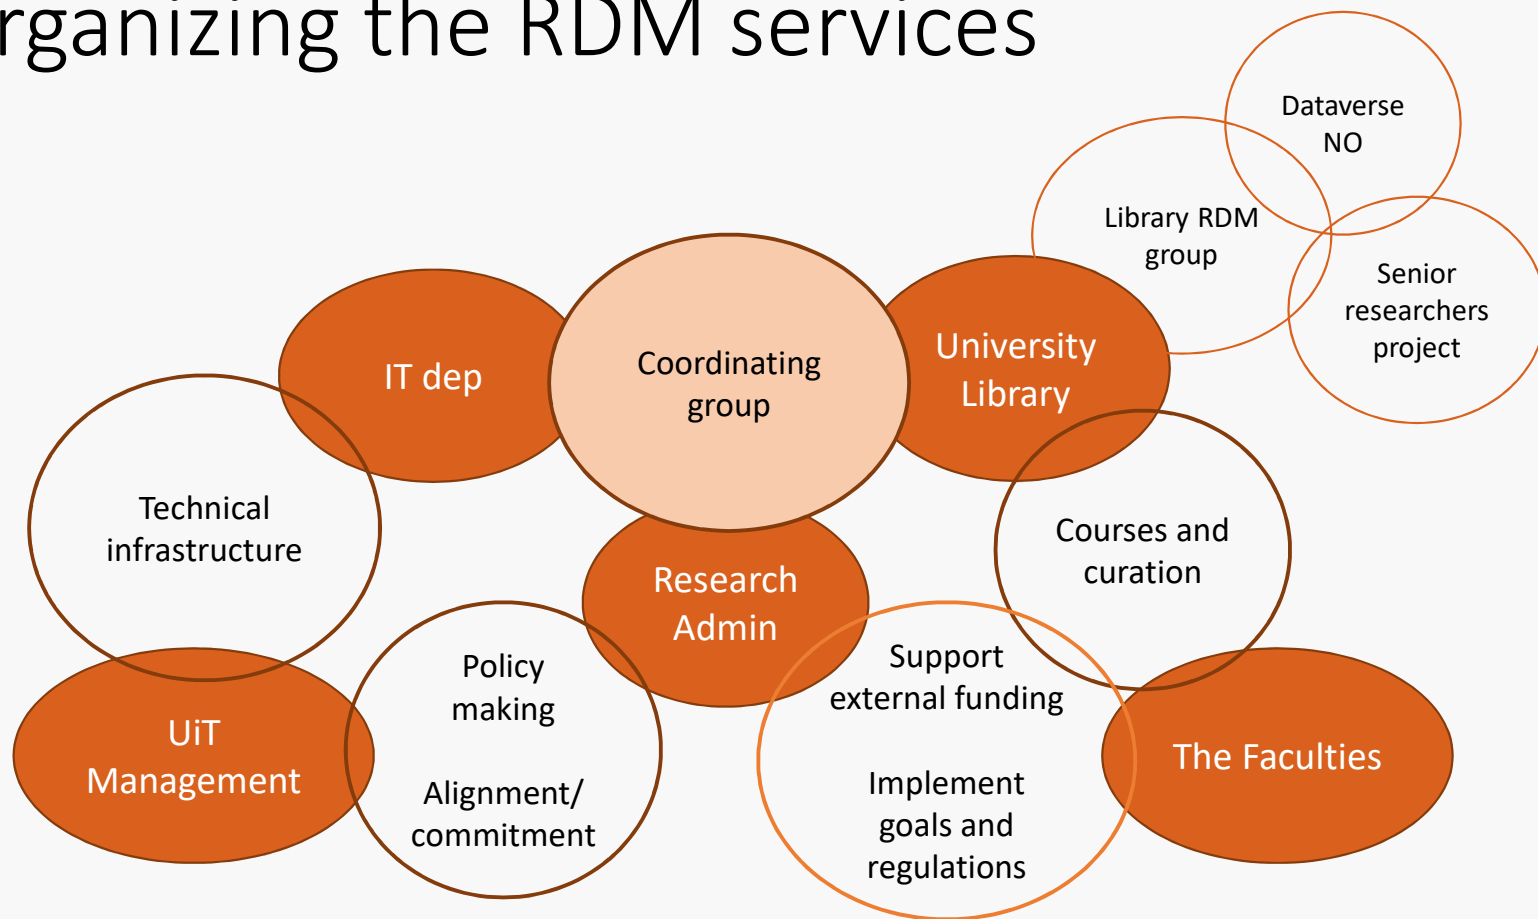

- Development and scaling
- Organization and collaboration
- Example: RDM training
- The road ahead

Development and scaling of RDM services

Organizing the RDM services

Collaboration - basic principles and activities

Principles

- Workflow based on existing organization
- Defined responsibilities
- Develop and incorporate new competences and services in dialogue and process
- Coordinated as one coherent DMP service
- No new organizational units/departments (so far)
- Management commitment
- From pilot and project to integrated services

Activities

- Coordinating group (biweekly)
- Working groups (project periods)
- Workshop with leaders present (yearly)
- RDM-lunch (monthly)
- Shared digital room (Teams)

- Reporting (yearly)
- Managers agenda

Collaboration – strengths and challenges

- ✓ Goals and direction – shared and mutual
- ✓ Responsibilities well defined
- ✓ Complementary competence
- ✓ Flexibility and tolerance
- ✓ Sufficient resources and capacity
- ✓ Culture and personal traits – trust, loyalty and shared identity
- ✓ Efficient organizational complexity and size
- ✓ Environment – shared understanding
- ✓ Handling diversity and disagreements

Dialogue & spreading the word

Continuous outreach to research communities, including leaders and supervisors, to raise awareness of their role and responsibilities.

Meetings with different stakeholders at appropriate moments (e.g. policies, funding application deadlines).

Councils with decision-makers

IT events & administrative fora

ToDoS (Tromsø Doctoral Students)

Get invitations and tailor-make sessions for various user groups (e.g. departments, research groups, student networks)

RDM training @ UiT

Acquisition of competence and skills in safe, competent and collaborative conditions, fuelled by **engagement and interaction** horizontally and vertically.

All training framed in a **learning perspective**

- motivation
- activity
- support

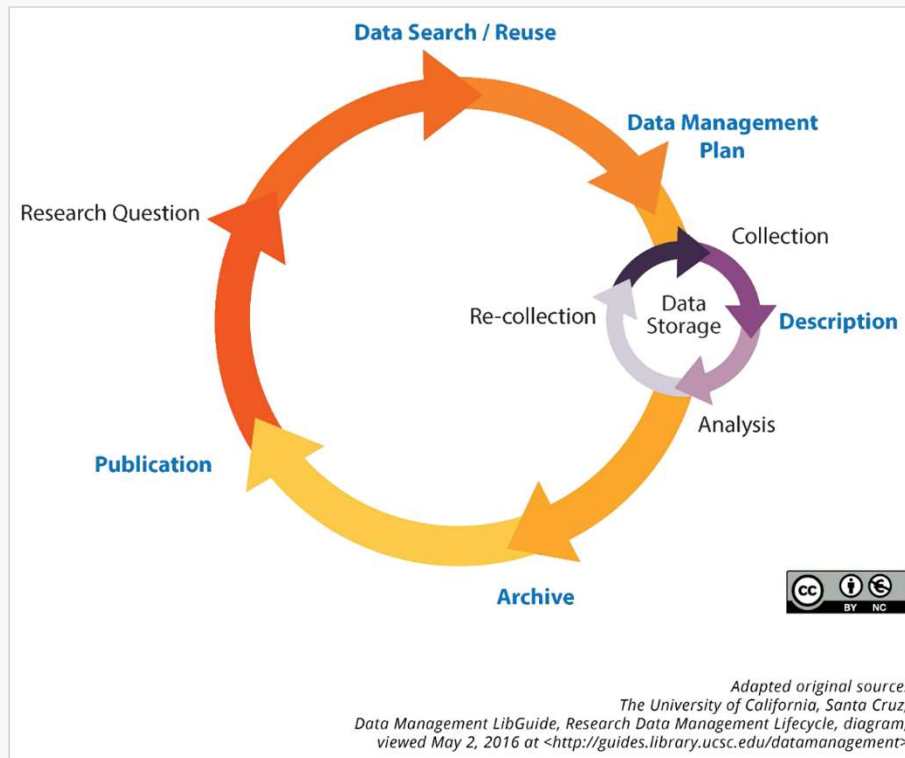

Photo: Colourbox

Developing the training program

- Starting point: the RDM lifecycle.
- Gradually filling gaps, with responsibility assigned to the relevant unit.
- Teaching group: 8 people and growing.
- Capacity building through experience, feedback and peer evaluation.

The training program

Photo: Rune Ytreberg

- Guidance
 - Dataset curation
 - Data Management Plans
 - Application writing
- Open courses
 - Introduction to the whys of RDM
 - Thematic courses (searching, structuring, storing, sharing, citing, licencing, agreements, DMP)
- Handling data with sensitive information (under development)
 - Working group in place
 - IT, legal advisors, data curators, researchers

RDM integrated in regular teaching

Supervisor seminars, PhD courses with ECTS credits, MA programs

Photo: flickr.com/photos/uitfoto

The road ahead

- Implement research data management as part of regular operations at the institution.
- Respond to national guidelines.
- Collaborate nationally in an international context: RDA Norway.

Abstract

Since long, UiT The Arctic University of Norway devotes much focus and resources on Open Science, in particular open access to publications and open research data. Navigating in a landscape of rapid change, collaboration is key to raise awareness, create engagement, enhance competence, and make things move forward. In this talk, we focus on the development of support services for research data management within the frame of an institutional policy adopted in 2017. We pay particular attention to the collaboration between the research administration, the IT department and the University Library, which has proven successful for UiT at the institutional, national, and international level.
