Intro

- Language is a structured inventory of cxns, a constructicon, also named
 - a "repertory" of cxns (Fillmore 1988: 37),
 - a global "network" of cxns (Goldberg 2013, Goldberg & Herbst 2021: 286),
 - a set of networks (Langacker 2008: 237)
- Lyngfelt (Lyngfelt et al. 2018: 6):

"Most work in CxG consists of case studies of individual cxns or small groups of cxns, and the overall structure of the constructicon as such is largely left unexplored".

- We work towards filling this gap in the project "The Russian Constructicon"
 - 224 Assessment and 222 Attitude cxns (Endresen & Janda 2020)
 - 164 comparative cxns (Mordashova 2021)
- This talk – a study of a relatively large network of 57 Russian cxns that express prohibition of an action
- We explore the internal organization of this network in terms of related and interconnected families and clusters

Plan for this talk

1. Part of a larger project "The Russian Constructicon"

2. Theoretical background

3. A radial category model of a network of Russian prohibitive constructions

4. Proposed hierarchichal groupings: family – cluster – network of cxns

1. This study is part of a larger project: The Russian Constructicon

- **The Russian Constructicon** is a free open access electronic resource that offers a searchable database of Russian constructions
- **Content:** 2265 multi-word grammatical constructions & descriptions of their properties & corpus-based illustrations
- **Target audience:** students and teachers of Russian as a foreign language, researchers, specialists in natural language processing
- **Time spent on creating it:** 5 years, 2016 – 2020 (2021)
- **User-friendly interface:** <https://constructicon.github.io/russian/>

More details in our talk on Friday, Aug 20 at 14.45-15.15

Janda, Endresen, Zhukova, Mordashova, Rakhilina

Example of a prohibitive construction

1247

NAME хорош VP-Ipfv.Inf! - *Эй, наверху! Хорош прыгать!*

DEFINITION (Russian) Конструкция используется, когда говорящий побуждает собеседника прекратить выполнять [некоторое действие]_{Action}. Говорящий оценивает это действие отрицательно, так как оно причиняет ему дискомфорт или кажется слишком длительным. Конструкция подразумевает отсутствие между говорящим и собеседником социальной иерархии и произносится в дружеском тоне.

DEFINITION (English) The construction is used when the speaker prompts the interlocutor to stop performing [some action]_{Action}. The speaker evaluates this action negatively, as it causes them discomfort or seems too long. The construction implies the absence of social hierarchy between the speaker and the interlocutor and is pronounced in a friendly tone.

DEFINITION (Norwegian) Konstruksjonen anvendes når taleren anmoder samtalepartneren om å slutte å utføre [en handling]_{Action}. Taleren har et negativt syn på handlingen fordi den volder ubehag eller synes å vare for lenge. Konstruksjonen forutsetter fravær av rangsforskjeller mellom taleren og samtalepartneren og fremføres i en vennskapelig tone.

EXAMPLES

1. Я им говорю — вы что, мужики. Хорош [слушать]_{Action} этот концерт по радио!
2. — Хорош [ссориться]_{Action}! — прервал девушек Илья. — Неконструктивно.
3. — Эй, Артем! Хорош [спать]_{Action}! Ну-ка вставай давай! Ты уже семь часов кряду дрыхнешь... Вставай же, соня!
4. — Хорош там [скакать]_{Action}! — крикнул Степан девочкам. Он сидел на корточках перед новой газовой плитой, читая руководство по эксплуатации.
5. — Васька, хорош [тормозить]_{Action}! — крикнул Андрей. — Открывай скорее двери!

55 semantic types of cxns grouped in 5 classes

Description available at <https://constructicon.github.io/russian/semantic-types/>

2. Theoretical background: Construction Grammar

- Constructions are entrenched language-specific form-meaning pairings available at all levels of linguistic complexity (Goldberg 1995, 2006; Croft 2001; Fried and Östman 2004, Langacker 2008).
- Goldberg & Jackendoff 2004: What makes the English resultative (sub)constructions form a family is "their family resemblance in syntax and semantics"

Approaches to a family: nuclear vs. extended

1. A family of cxns is an inheritance structure: one or more specific cxns instantiate a more abstract one and inherit its properties (Lyngfelt 2018: 7): parent vs child (a "nuclear" family – a family group consisting of parents and their children, one or more). Level of abstractness

1a. a subtype: A family of cxns with multiple inheritance links

2. Horizontal relationships (links) between two or more cxns that have certain properties in common

3. Extended family extends beyond nuclear family, includes also aunts, uncles, in-laws, grandparents (all living in the same household)

Approaches to a family: nuclear vs. extended

1. A family consists of connections instant (Lyngfelt 20 group consisting of abstract network)

1a. a subtyp

VP do NP-Gen
X til Y-GEN
'to X to the point of Y!'

VP do absurd-a
X til absurd-GEN.SG
'to X til the point when it becomes absurd!'

Parent cxn

Child cxn

cxn 1

Parent cxn 2

Child cxn

2. Horizontal relationships (links) between two or more connections that have certain properties in common

3. Extended family extends beyond nuclear family, includes also aunts, uncles, in-laws, grandparents (all living in the same household)

Example of a family (7 cxns)

Quantitative cxns ‘Enough X-ing’, mild attenuated prohibition

Subgroup 1: "measuring" predicates; coding of the interlocutor optional or impossible

ID	Construction name	Illustration
114	dovol'n-o (PronPers-2.Dat) VP-Ipfv.Inf! <i>enough-ADV</i> YOU-DAT X-IPFV.INF ‘Enough X-ing (for you)!’	Dovol'n-o žalov-a-t'-sja! enough-ADV complain-IPFV-INF-MED ‘Enough complaining!’
344	Xvat-it (PronPers-2.Dat) VP-Ipfv.Inf! <i>be_enough.PFV-FUT.3SG</i> YOU-DAT X-IPFV.INF ‘Enough X-ing (for you)! That will do!’	Xvat-it rug-a-t'-sja! be_enough.PFV-FUT.3SG fight-IPFV-INF-MED ‘Enough fighting! It will do!’
1247	xoroš-∅ VP-Ipfv.Inf ! <i>good-SG.MASC.SHORT</i> X-IPFV.INF ‘Quit X-ing! Cut it out!’	Ěj, naverxu! Xoroš-∅ pryg-a-t'! hey upstairs good-SG.MASC.SHORT jump-IPFV-INF ‘Hey, up there! Stop jumping!’
1274	xvat-it / dovol'n-o Cop NP-Gen! <i>be_enough.PFV-FUT.3SG enough-ADV</i> COP X-GEN ‘Enough X-s! So much for the X-s!’	Xvat-it nežnost-ej! be_enough.PFV-FUT.3SG softness-GEN.PL ‘Enough cuddling!’

Example of a family (7 cxns)

Quantitative cxns ‘Enough X-ing’, mild attenuated prohibition

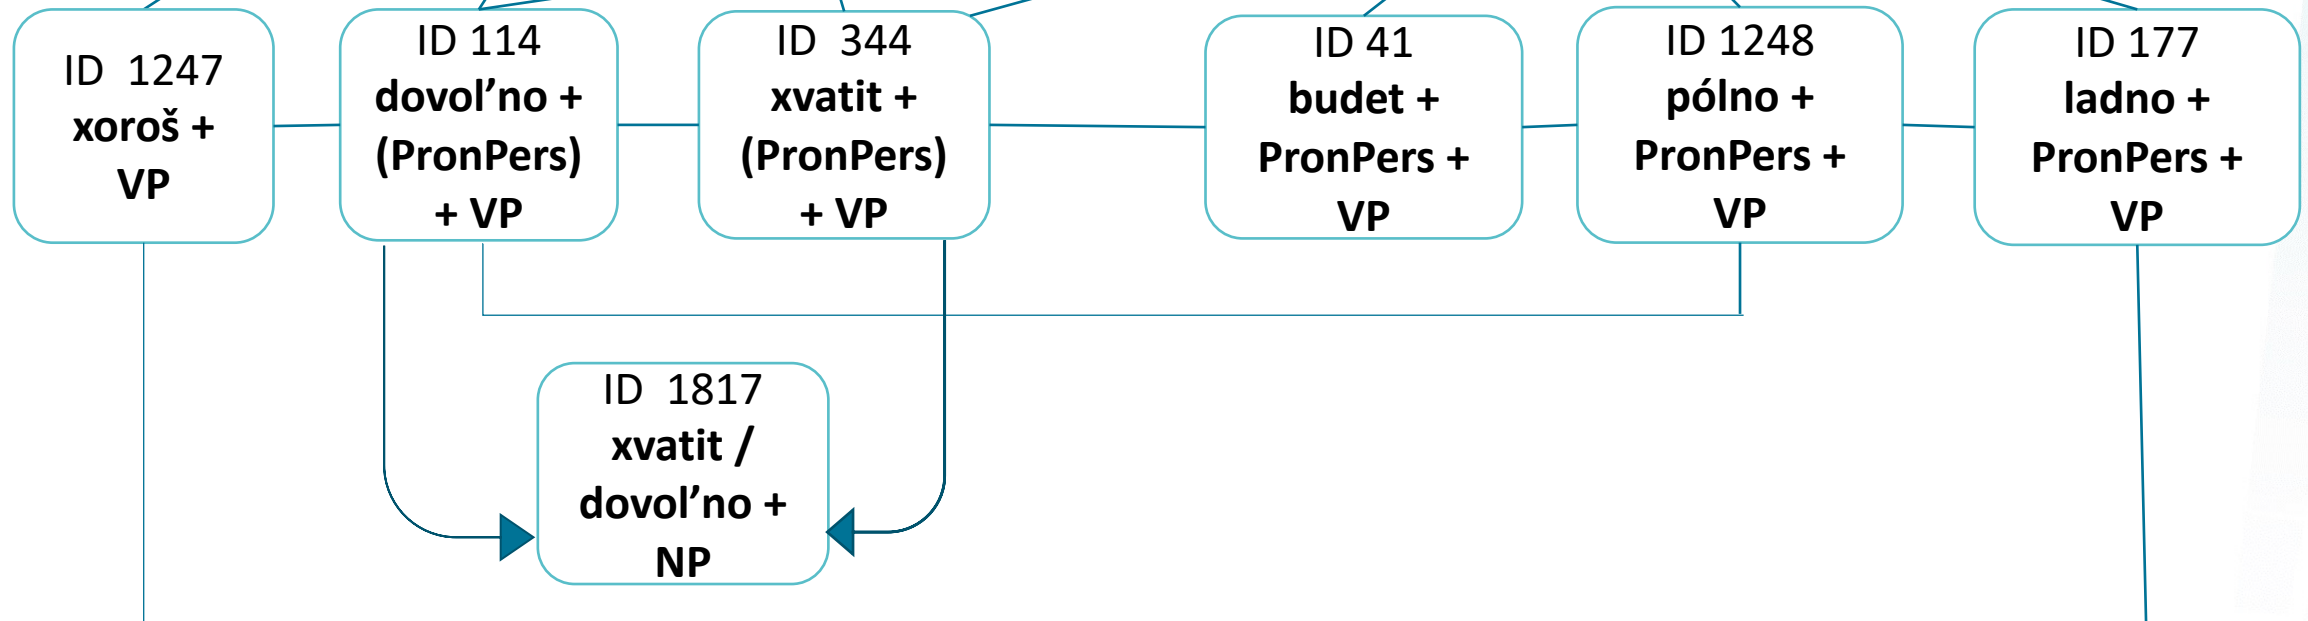

Subgroup 2: more supportive attitude of the speaker; obligatory coding of the interlocutor

ID	Construction name	Illustration
41	bud-et PronPers-Dat (VP-Ipfv.Inf)! <i>be.FUT-3SG</i> PRONPERS-DAT X-IPFV.INF ‘For you it is enough X-ing! That’ll do!’	Bud-et teb-e vr-a-t’! <i>be.FUT-3SG</i> <i>you.SG-DAT</i> <i>lie-IPFV-INF</i> ‘Enough telling lies!’
1248	póln-o PronPers-2.Dat VP-Ipfv.Inf! <i>full-SG.N.SHORT</i> <i>you-DAT</i> <i>X-IPFV.INF</i> ‘You have X-ed enough! That will do! Move on!’	Póln-o teb-e plak-a-t’! <i>full-SG.N.SHORT</i> <i>you.SG-DAT</i> <i>cry-IPFV-INF</i> ‘Enough crying for you, you should move on!’
177	ladn-o PronPers-2.Dat VP-Ipfv.Inf! <i>harmonious-SG.N.SHORT</i> <i>you-DAT</i> <i>X-IPFV.INF</i> ‘You are done X-ing! Stop X-ing!’	Ladn-o vam spor-i-t’! <i>harmonious-SG.N.SHORT</i> <i>you.PL-DAT</i> <i>argue-IPFV-INF</i> ‘That is enough arguing for you!’

The structure of the family

more abstract schema
[quantifying predicative + VP-lpfv.Inf specifying the activity]

subtype of abstract schema with participant overtly expressed
[quantifying predicative + Experiencer + VP-lpfv.Inf specifying the activity]

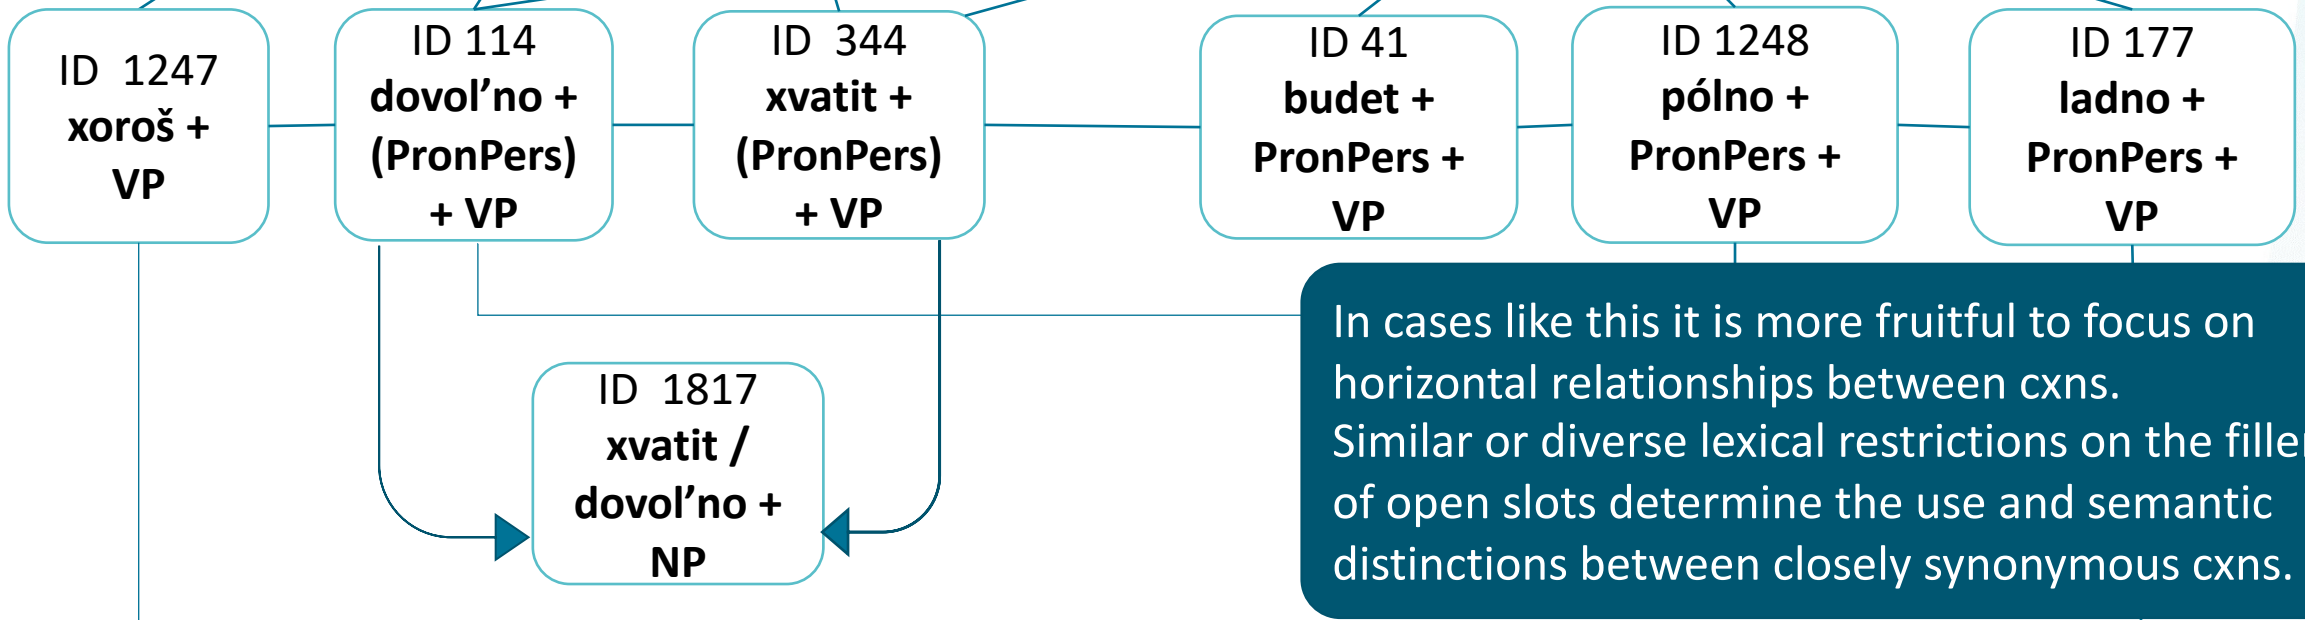

The structure of the family

The predicates in these cxns are grammaticalized in different degrees. Structural similarities are blurred. This makes it difficult to compare them and to associate them with more abstract but schematic patterns.

more abstract schema
[quantifying predicative + VP-lpfv.Inf specifying the activity]

subtype of abstract schema with participant overtly expressed
[quantifying predicative + Experiencer + VP-lpfv.Inf specifying the activity]

In cases like this it is more fruitful to focus on horizontal relationships between cxns. Similar or diverse lexical restrictions on the fillers of open slots determine the use and semantic distinctions between closely synonymous cxns.

57 Russian prohibitive constructions form 12 families visualized as boxes.

1:2 (7 constructions)

Cluster 2

Prototypical prohibition

1. The speaker prompts the interlocutor to not carry out an undesirable activity.
2. The interlocutor is an individual person or a specific group of people.
3. The speaker has more authority / life experience / higher status in the social hierarchy than the person to whom the prohibition is addressed (e.g. boss vs. subordinate, adult vs. child).
4. The prohibition is spoken in a strict commanding peremptory tone.

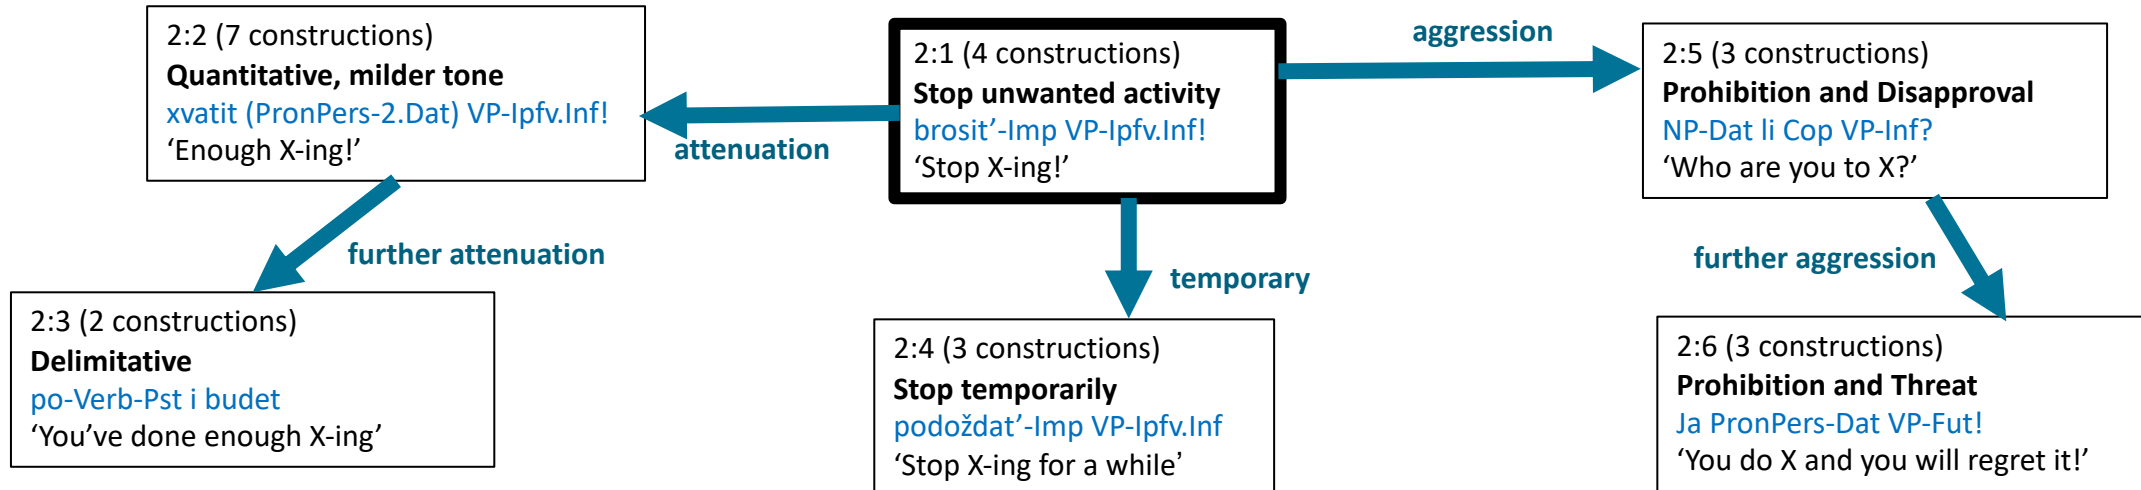

Lines with arrows show semantic transitions between families of cxns.

Cluster 1

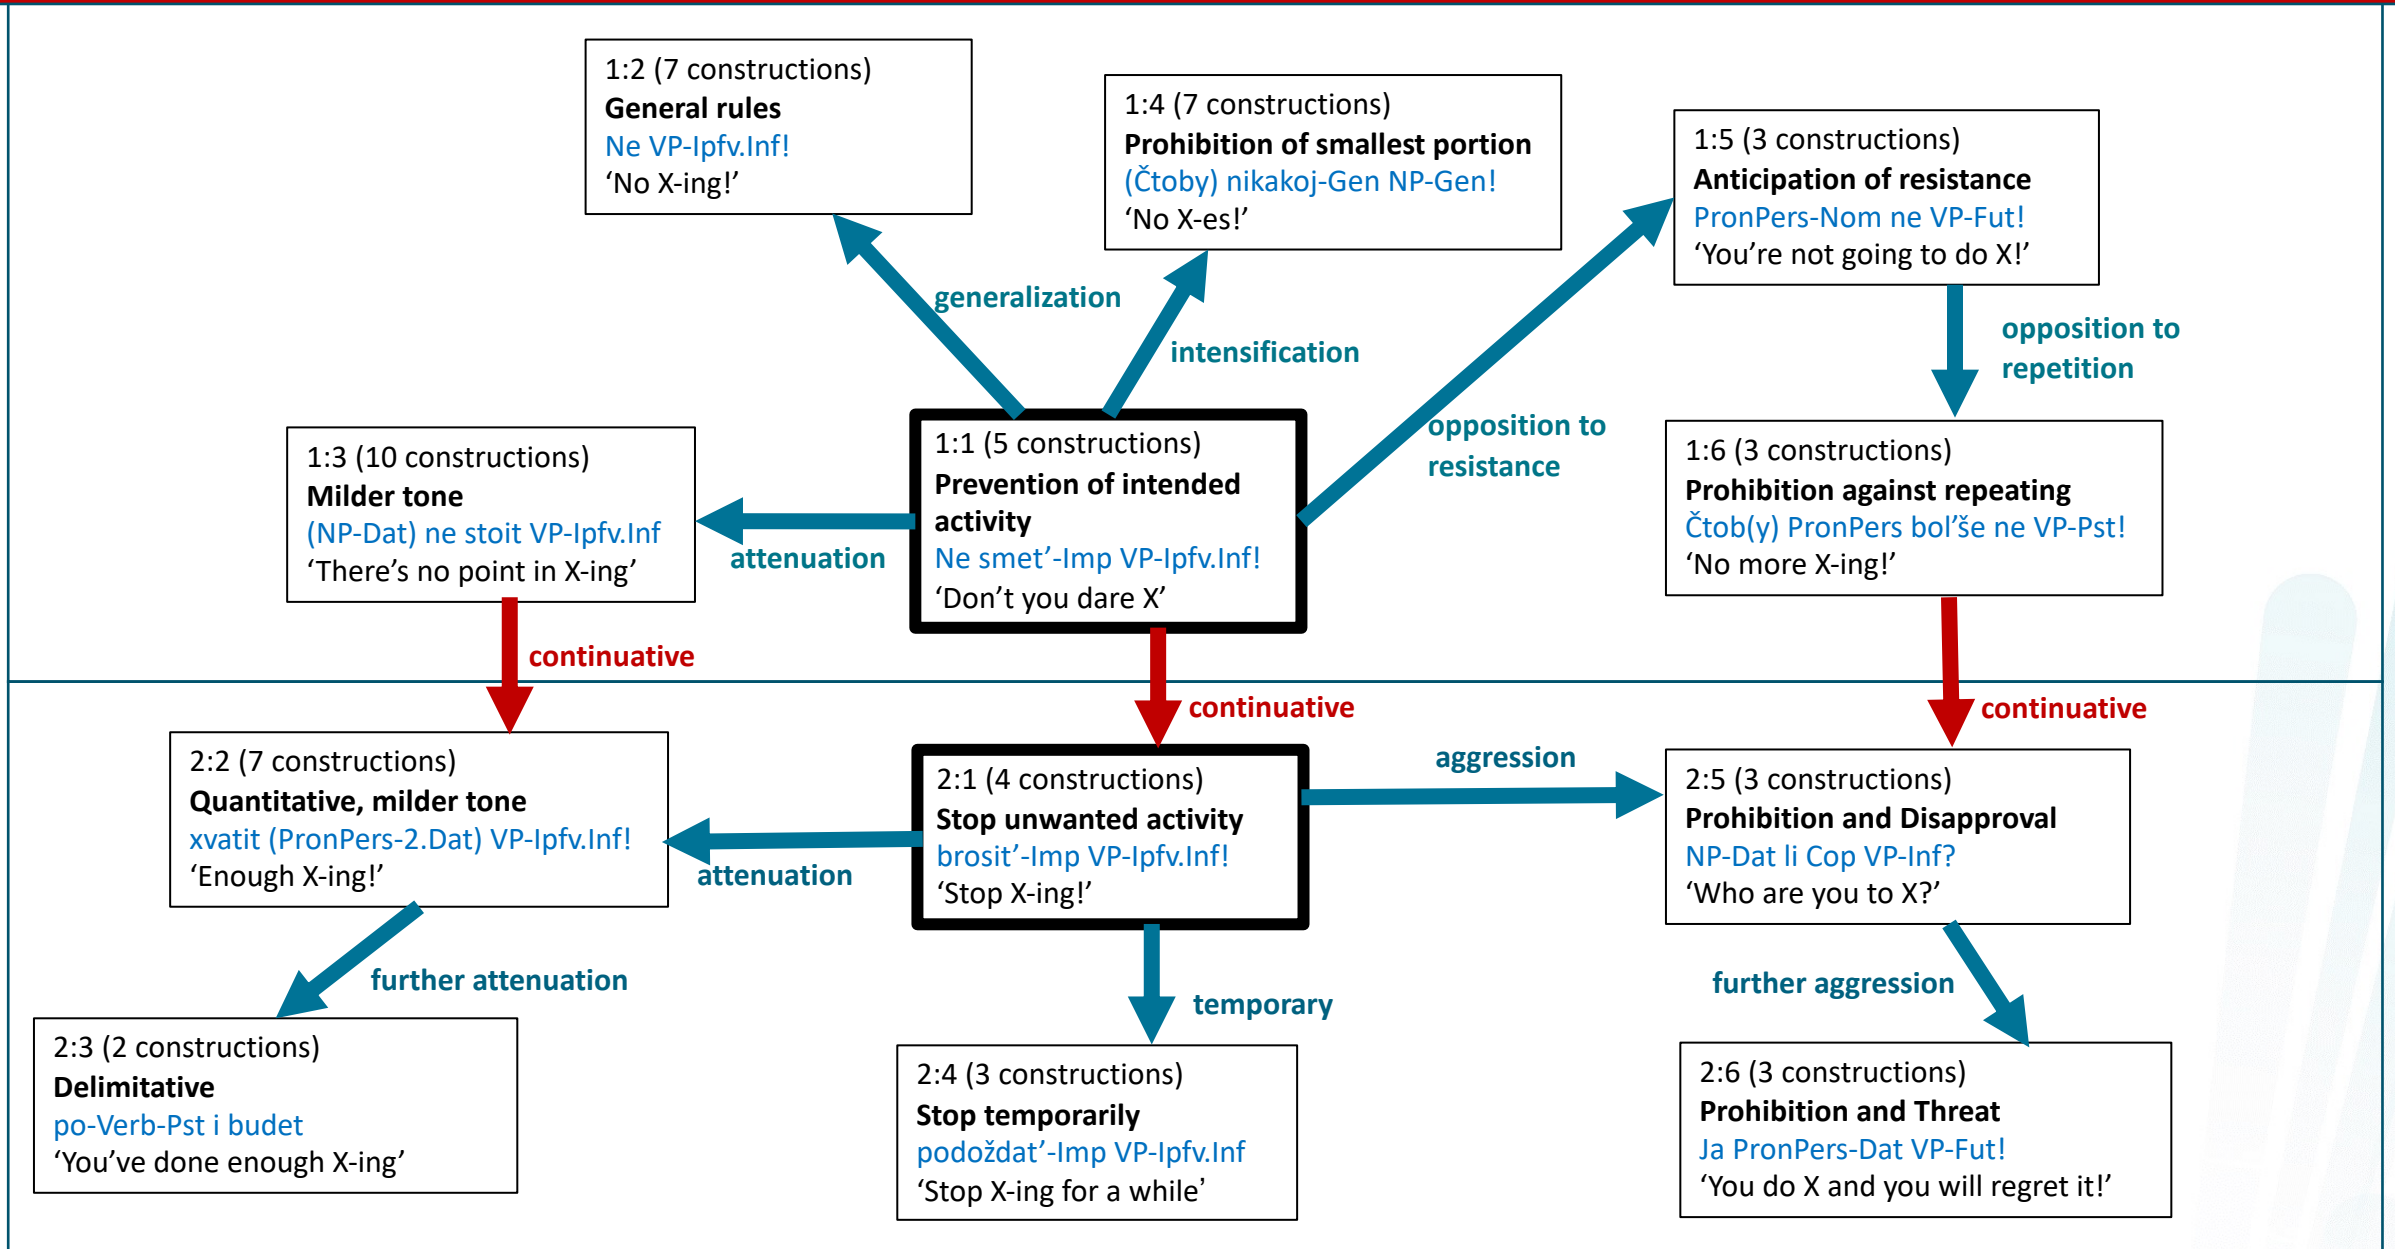

Cluster 2

The two clusters are connected through the semantic transition Continuative.

Cluster 1

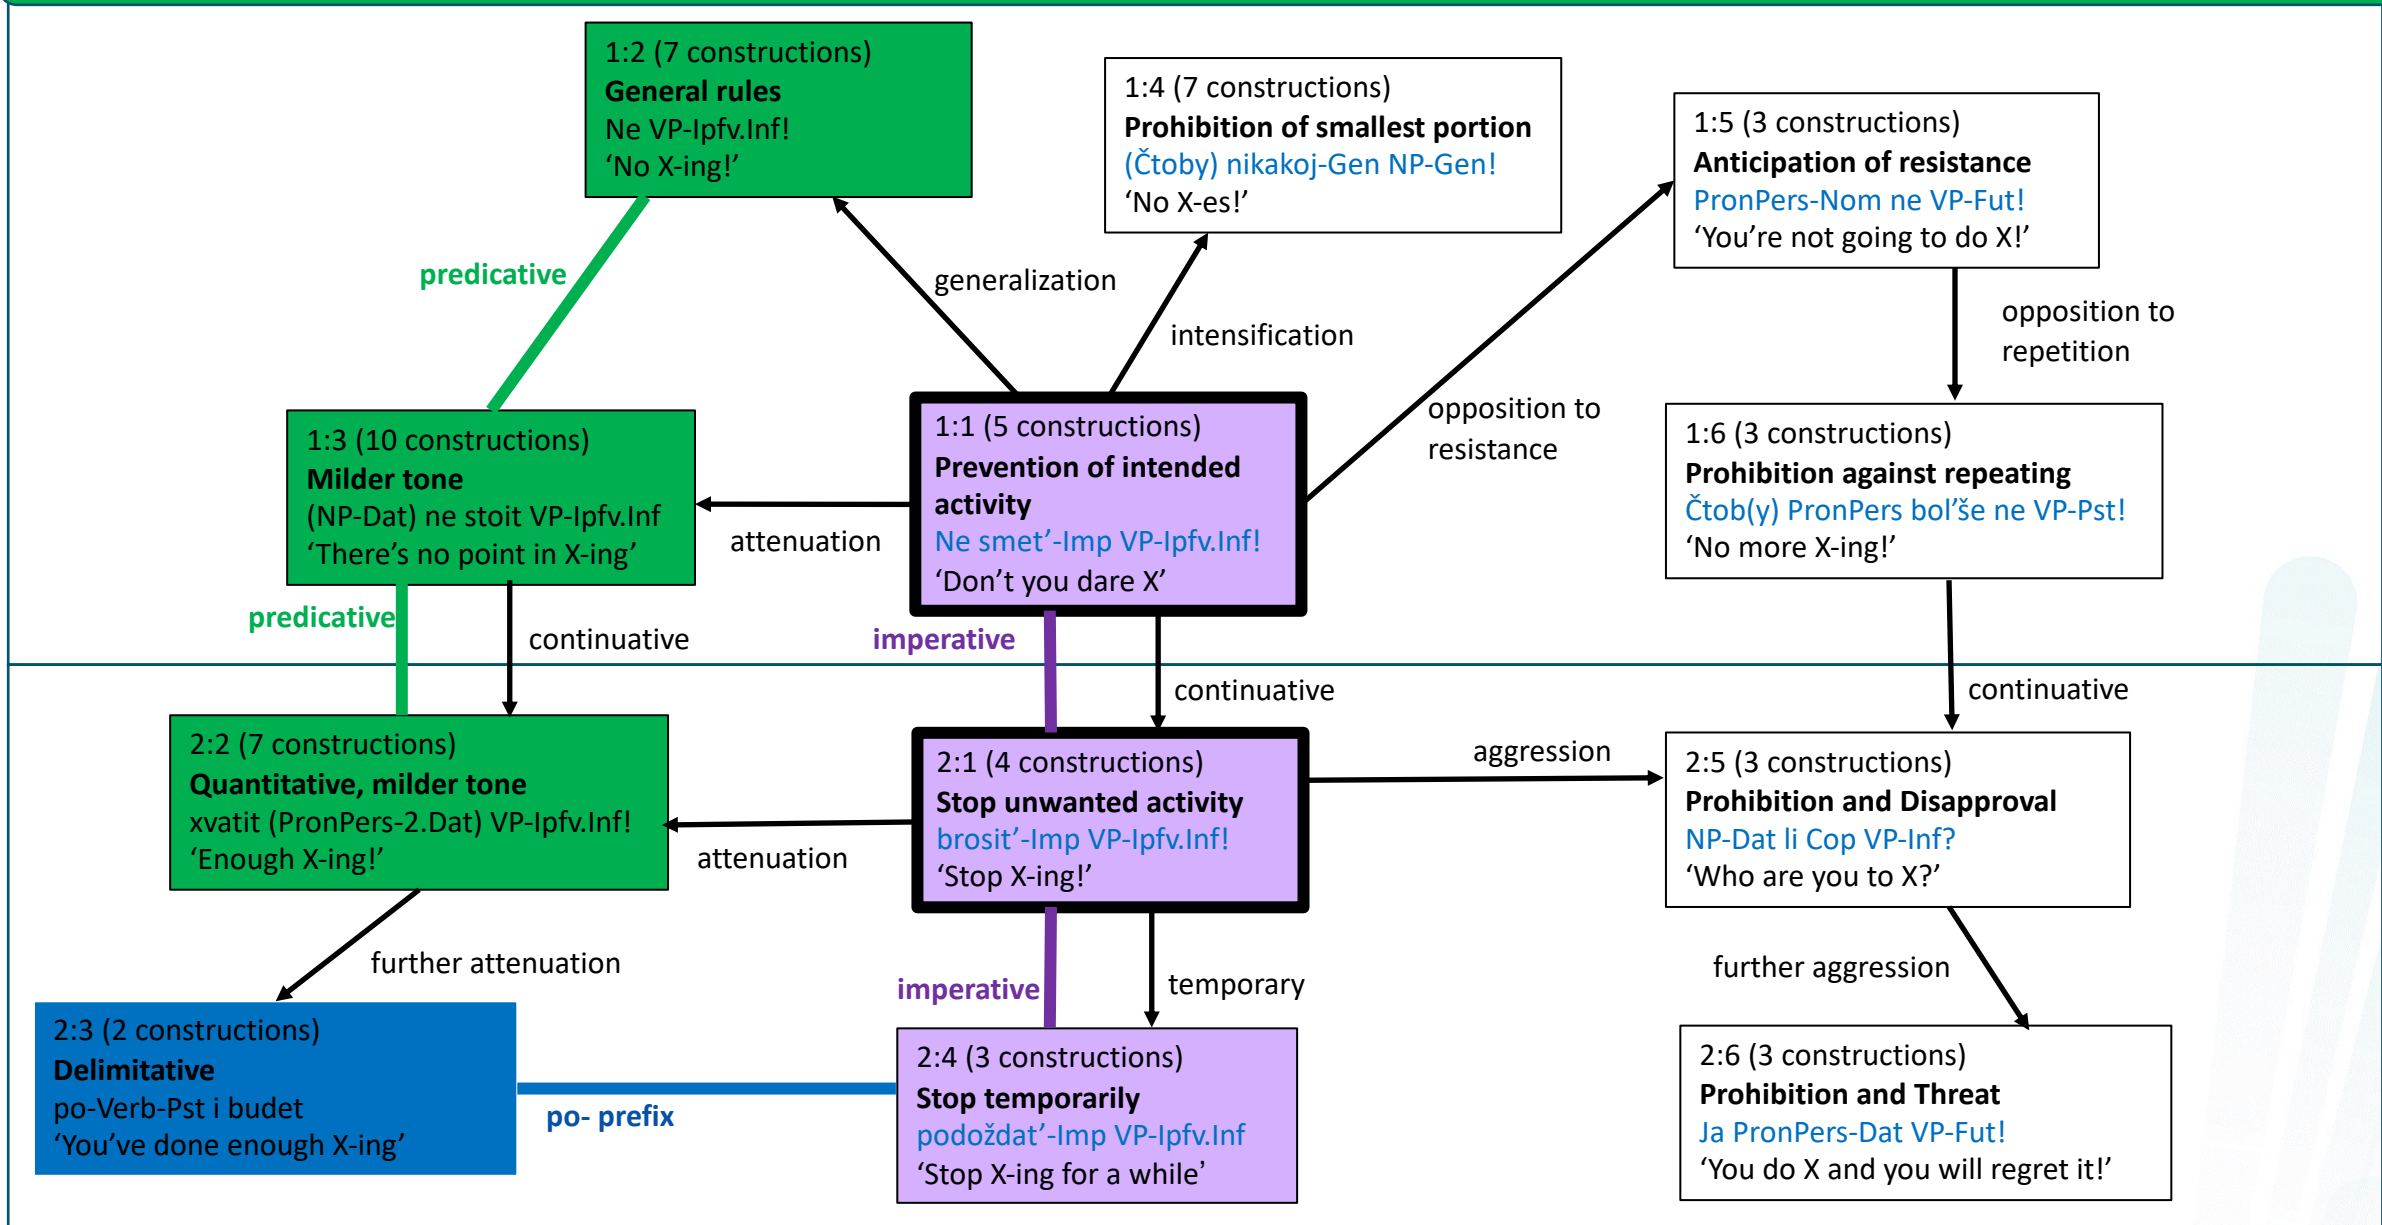

Cluster 2

Lines without arrows indicate syntactic/formal similarities between families of cxns.

Cluster 1

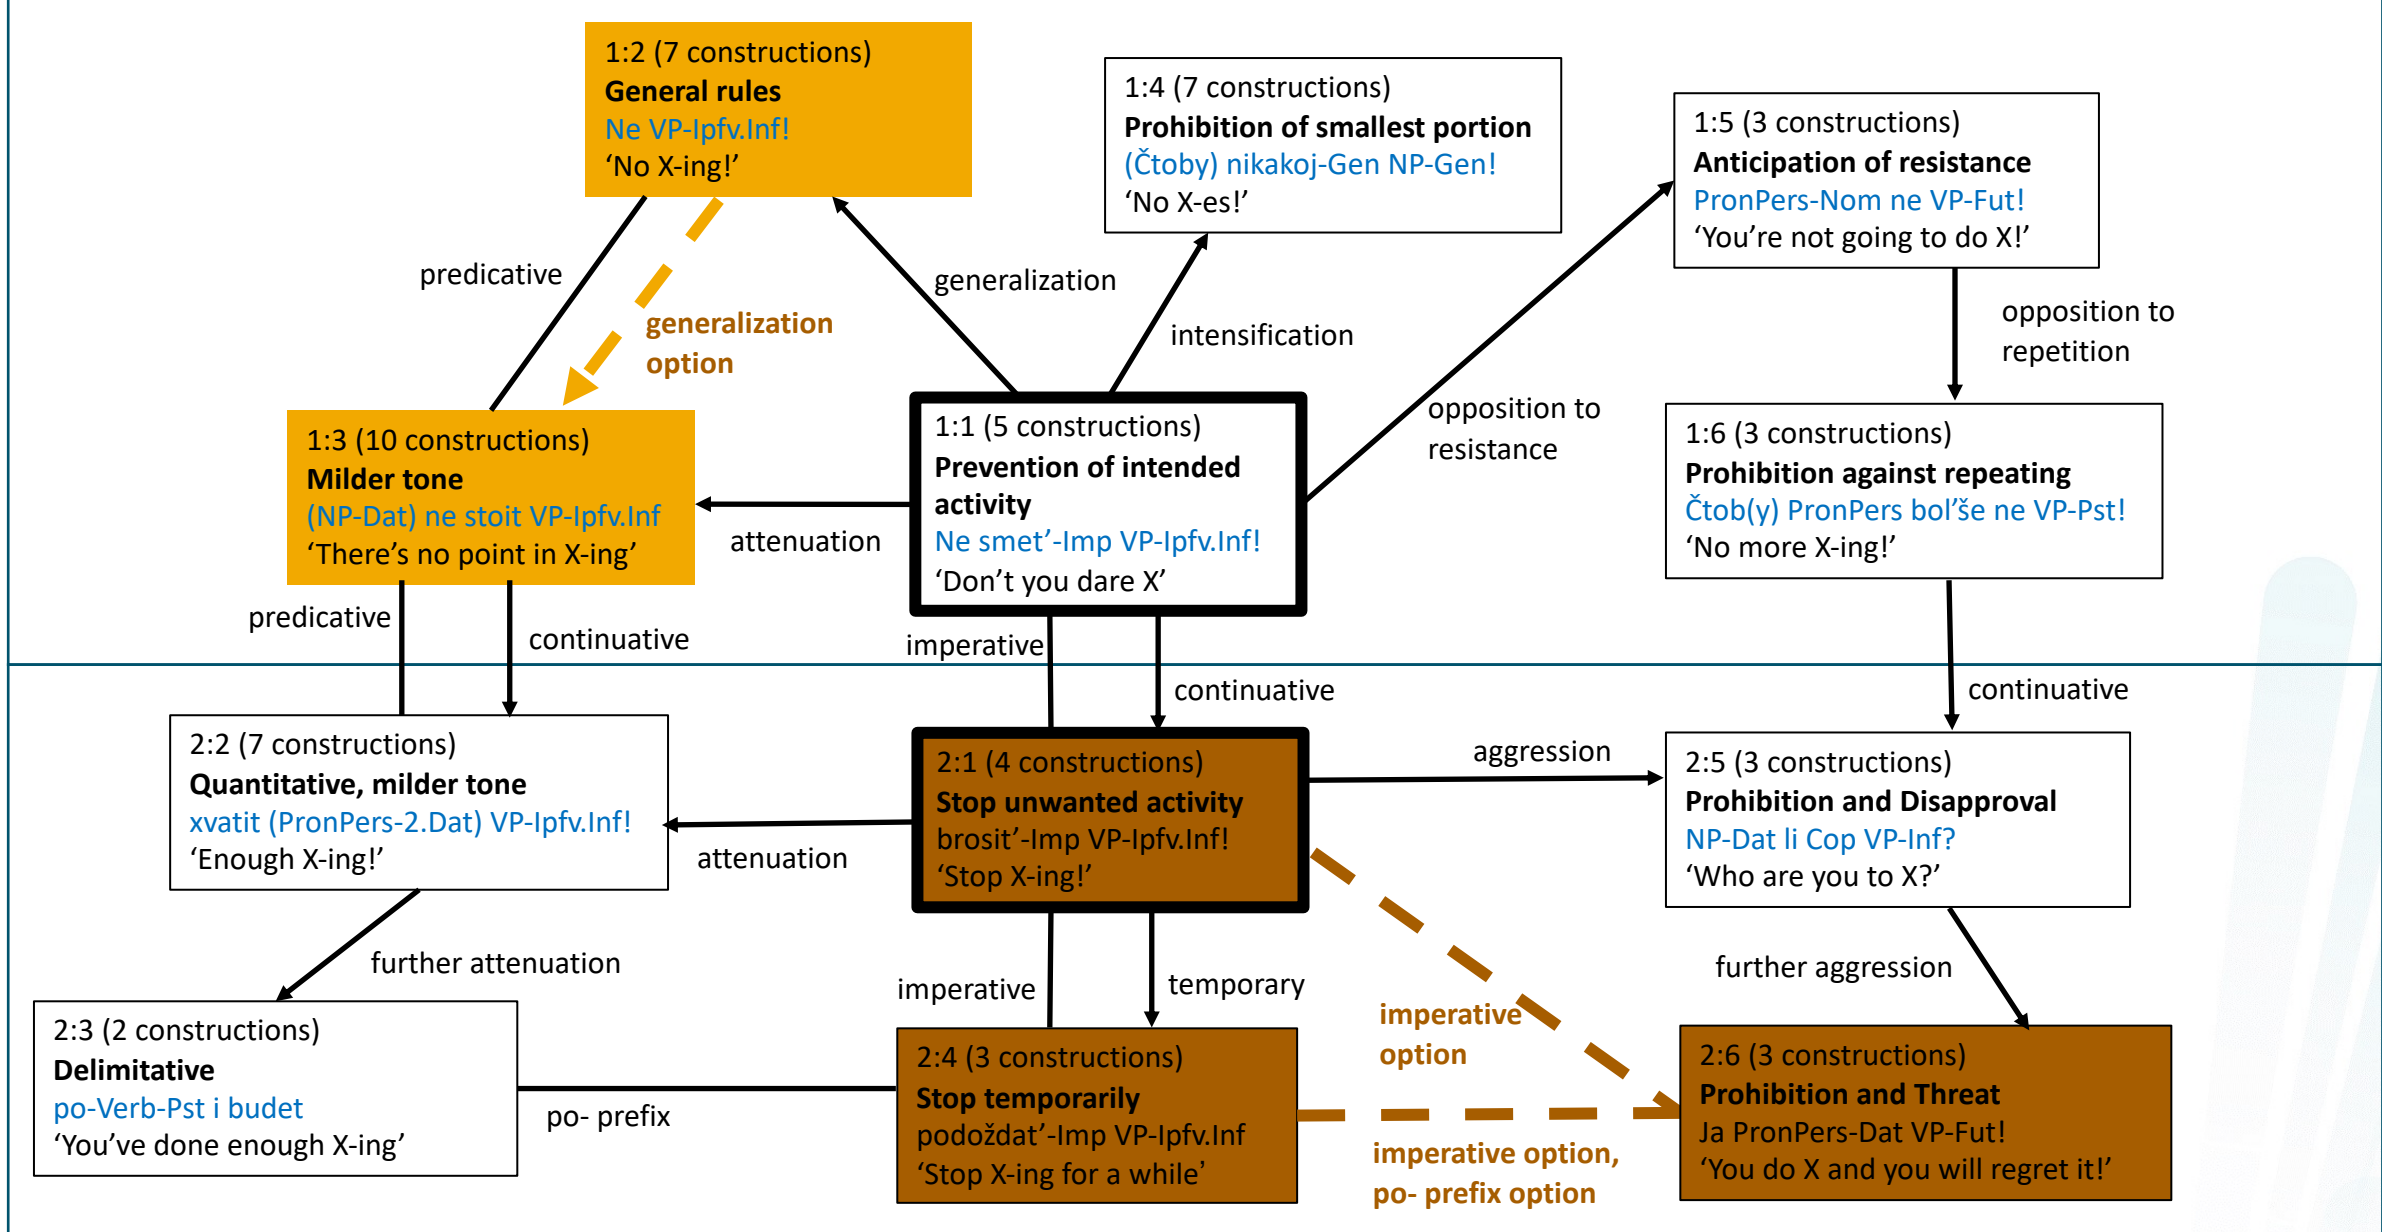

Cluster 2

Dotted lines and arrows indicate weaker relationships (properties observed in some cxns in a family).

Cluster 1

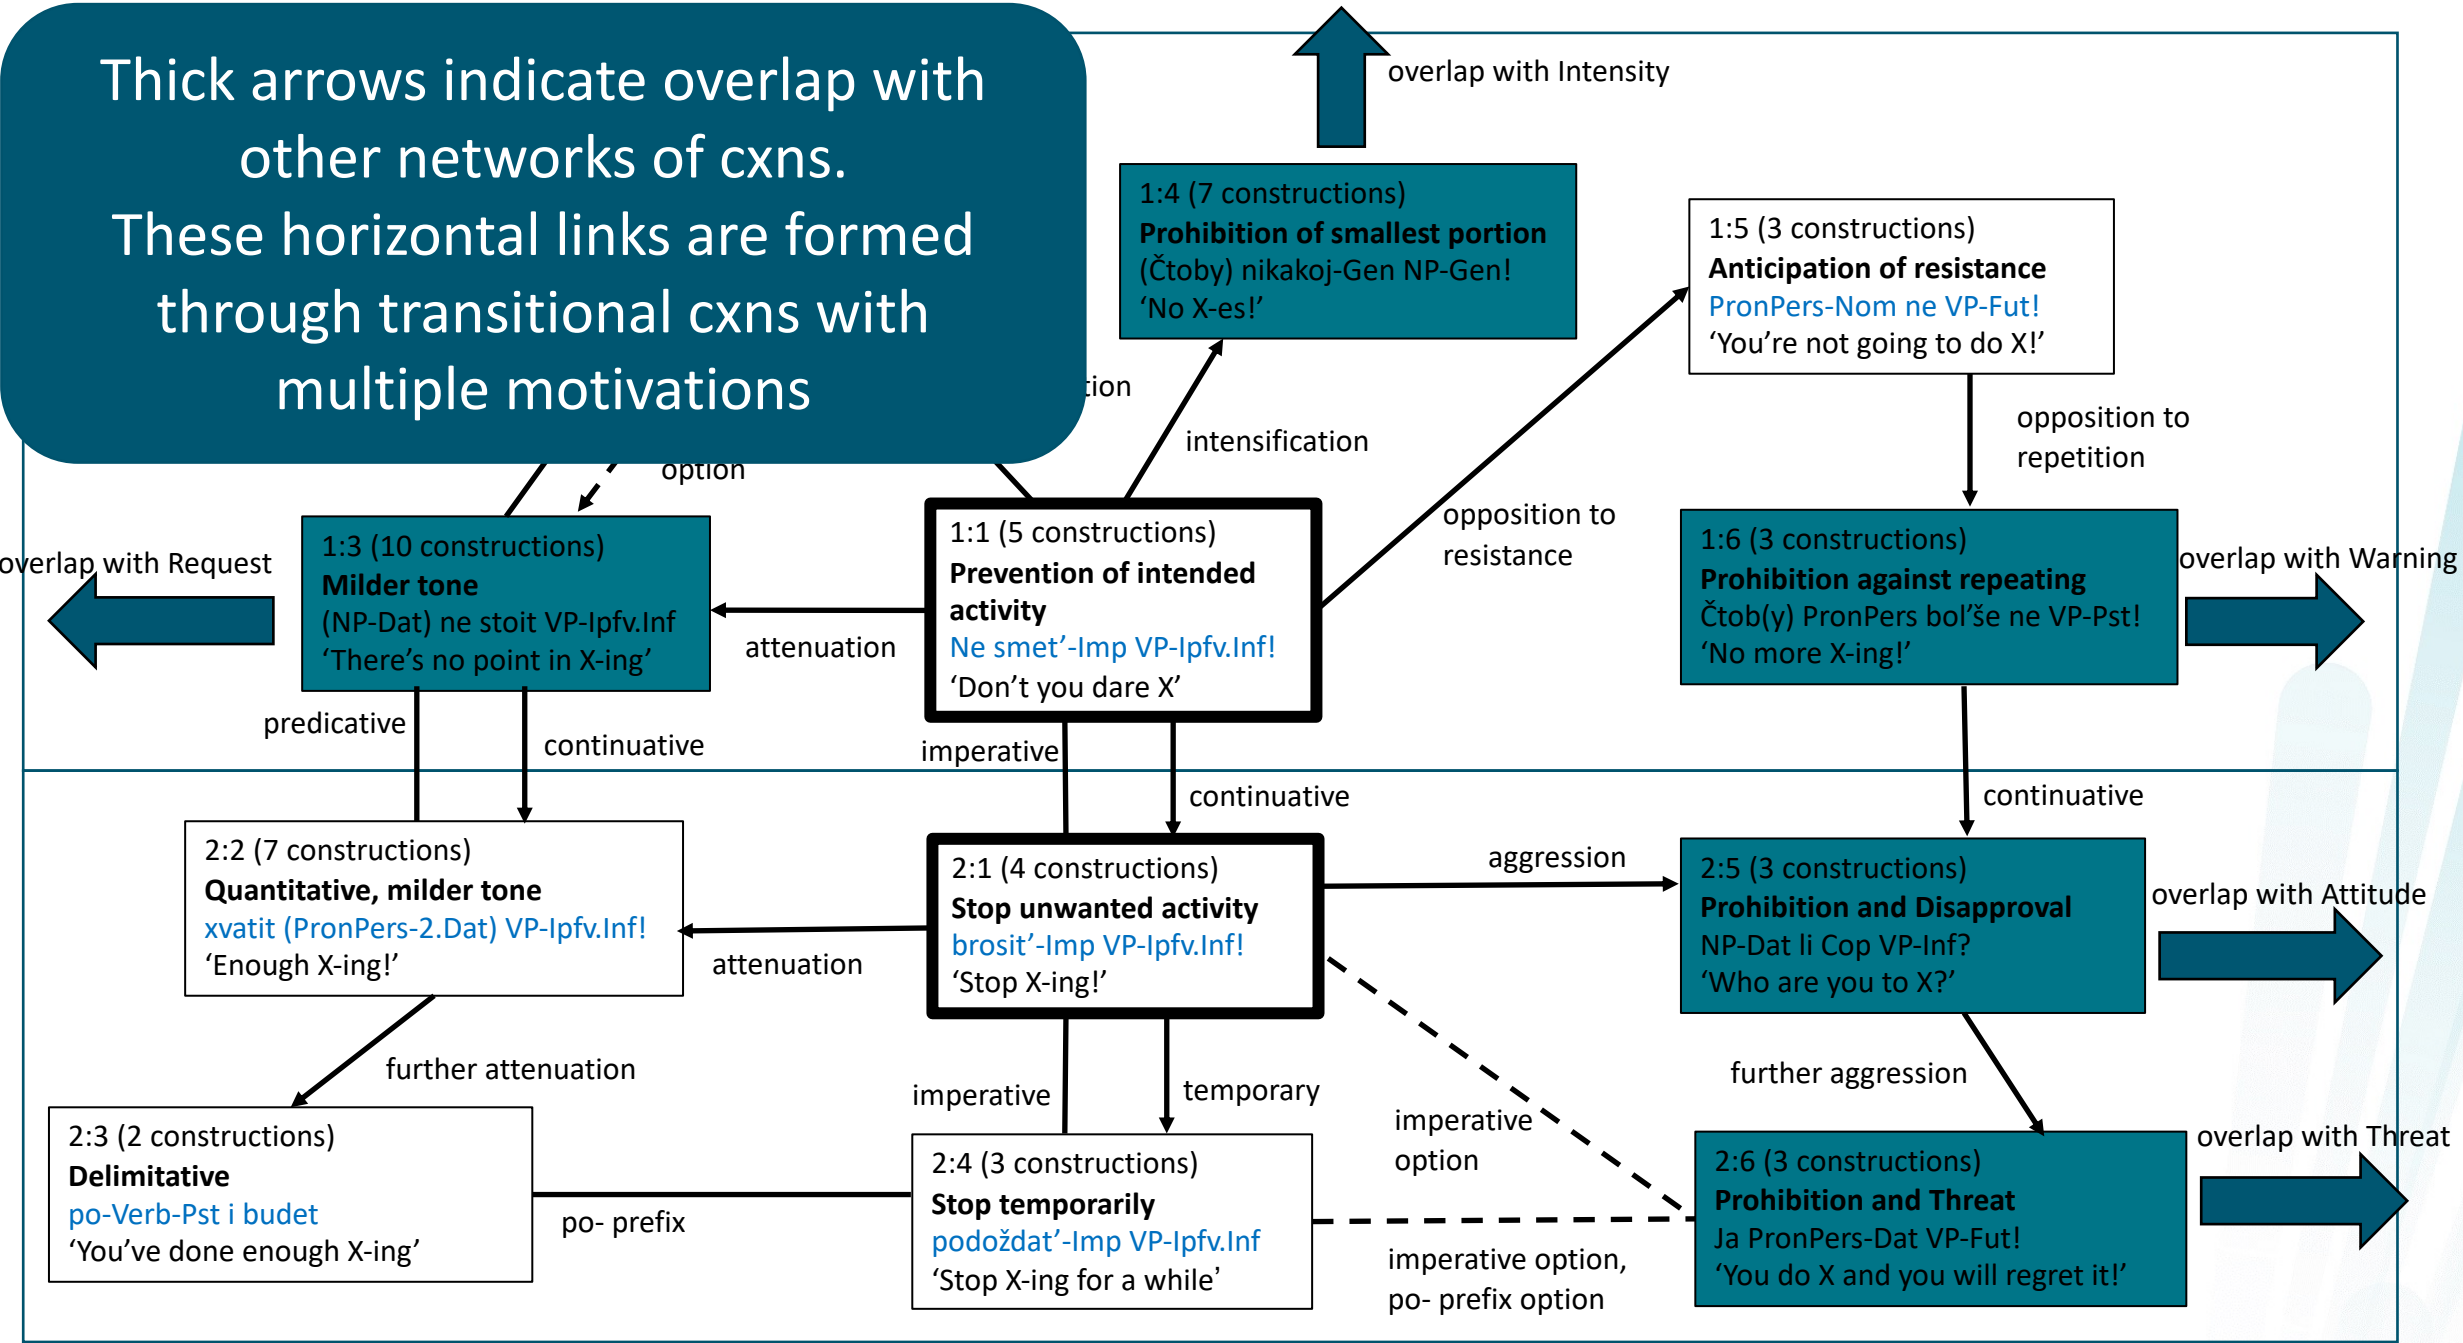

Cluster 2

Cluster 1

Thick arrows indicate overlap with other networks of cxns. These horizontal links are formed through transitional cxns with multiple motivations

Cluster 2

Network of 57 Russian prohibitive constructions

Conclusions

Family:

- the smallest grouping of (usually 2-9) cxns that are nearly synonymous;
- some members may also share similar syntactic structure and anchor words;
- cxns in a family may share not necessarily all properties but various subsets of these properties (family resemblance)
- focus on horizontal relationships between cxns, but can also include inheritance links

Cluster:

- a group of families that displays a radial category structure,
- with a core prototypical family of cxns and related families that are more or less peripheral and encode additional semantic nuances

Network:

- a structured group of clusters sharing general semantics such as Prohibitive, Comparison, Assessment, etc.
- Often contains a prototypical cluster and related clusters joined by semantic links or shared families

Conclusions

Investigation of relationships between cxns in a family can help to

- differentiate between two (or more) nearly synonymous cxns and provide them with thorough descriptions
- predict how a family of cxns can expand or evolve
- identify typologically relevant anchor words (i.e. fixed elements of cxns)
