## Rett cruise til rett person til rett tid

*En studie av differensial prisstrategi for Hurtigrutens rute mellom Bergen og Kirkenes*

**Kristina Baryshnikova**

*Masteroppgave i Master in Economics - desember 2016*

## Forord

Denne oppgaven markerer slutten på mitt mastergradsstudium i samfunnsøkonomi ved Handelshøgskolen i Tromsø. Det har vært to lærerike år og en viktig fase i livet mitt.

I den anledning vil jeg starte med å takke min veileder Øystein Myrland for all veiledning og støtte under hele prosessen. Videre vil jeg takke mine venner og familie for deres tro på meg.

Tromsø, desember 2016

Baryshnikova Kristina

## Sammendrag

Cruisebransjen har vist den høyeste veksten og utnyttelsen av kapasiteten blant samtlige turistindustrier de siste årene. Utvidet valg på om bord aktiviteter, fokuset på nye destinasjoner og naturopplevelser har bidratt til økt popularitet på cruise reiser.

Til tross for økt interesse for bransjen, gjenstår flere av områder lite forsket.

Det har vært mye diskusjon omkring implementering av Revenue management i bransjen, en disiplin med sentralt fokus på pris som et av de mest effektive verktøyene til å maksimere salgsinntektene.

Med hjelp av unik markedsdata fra Hurtigruten, fokuserer den studien på å redegjøre sammenheng mellom pris og prisbestemmende cruise karakteristikk med benyttelsen av hedonisk modell. Dette er en relativt ny tilnærming i forskning innenfor reiselivsnæringen. Det viktigste bidraget med denne studien er i analysen over tid, gjennomført gjennom estimering av modellen over 48 månedsperioder, som gir en ny perspektiv til å observere endringer i differensiert pris. Som følge av resultatene har det vært hensiktsmessig å først finne en optimaliseringsløsning på bestillingstidspunkt, deretter finne priselastisitetene per sesong og markedssegment. Med hensyn til å rapportere signifikansen på optimale verdier og elastisitet estimatene har jeg benyttet delta metoden på bakgrunn av ikke linear sammenheng av parametere.

Resultatene viser at sommer vær, også felles ferisesesong er en viktig faktor som bidrar til økt forklaringsgraden mellom variablene, som også fører til et mer stabilt pris mønster i mellom årene. Funnene tyder på at cruise pris oppfører seg svært dynamisk i forhold til etterspørsel og kundes preferanser, med antakelsen for konstante kostnader. Det observeres også at flere eksterne forhold påvirker pris justeringer gjennom etterspørsel svingninger. Differensiert pris på lugartype viser seg å være mest stabile variabel gjennom alle sesonger. Priselastisitetene funnet i denne studien viser en stor variasjon mellom årene, samtidig som det observeres et mer stabilt mønster på høysesong som minst elastisk. Videre tyder resultatene på at landene i Norden samt CE eks. Frankrike er de mest elastiske.

Nøkkelord: cruisebransje, Hurtigruten, hedonisk modell, analyse over tid, priselastisitet

## 1. Innledning

Denne oppgaven er motivert av oppfatningen om at optimal prising er den viktigste strategien bak fremveksten av cruise bransjen. Implementering av Revenue Management til cruisebransjen som er målrettet for salg av reiser i forskjellige booking klasser med hensyn til å maksimere inntekter (McGill & Van Ryzin, 1999) har vært vellykket. Den omfatter innføring av differensierte priser, i tillegg til reduserte billettpriser med økt fokus på salg om bord. Det faktumet at Revenue Managements teknikker har tilpasset seg først til fly- og hotellbransjer før implementering i cruisebransjen gir ofte grunn til sammenligning av praksiser mellom sektorer. Cruisebransje viser samme karakteristikk for utføring av Revenue Management, som en relativt fast kapasitet, egnet etterspørsel til segmentering, varens bederlighet, benyttelse av forhåndssalg, etterspørsel svingninger, lave marginale salgskostnader samt høye marginale produksjonskostnader (Sun, Gauri & Webster, 2011). Derimot finnes det ingen entydig mening om den tilpasser seg på liknende måte i cruisebransjen. Talluri og Van Ryzin (2004) bekrefter likheter i implementering av Revenue Management mellom hotell og cruise industrier. Samtidig hevder Biehn (2006) at «*A cruise ship is not a floating hotel*», mens Sun et al. (2011) viser at praksisen fra hotell ikke kan tilpasses cruise industrien. Blant de største forskjellene nevnes begrenset skips kapasitet og kostnader forbundet med hver gjest som fører til prising rettet mot hver gjest istedenfor per rom; større utvalg av lugartyper, også bestillingstype med lengre bookingsvindu og såkalt «wave booking period».

På bakgrunn av lite empirisk forskning innen bransjens prisstrategi, fokuserer denne studien på sammenheng mellom cruise karakteristikk og pris, på Hurtigrutens rute mellom Bergen og Kirkenes. Deretter knyttes funnene mot det teoretiske rammeverket for å danne et bilde av prisstrategi i cruisebransjen. Hedonisk prismodellen er valgt som metode for analyse, som undersøker prisdifferensiering mellom produktets egenskaper som er rangert etter kundes preferanser eller nytte (Lancaster, 1966). Det unike med den studien består i analysen over tid som gir mulighet til å observere hvordan pris endrer seg i forhold til cruise karakteristikk gjennom årene og dermed gjøre en antagelse til grunn av disse endringer. Et annet viktig bidrag er i undersøkelsen av priselastisitetene som er en interessant funn på bakgrunn av liten empirisk forskning tidligere. Oppgaven starter med presentasjon av bransjen og Hurtigruten. I neste avsnittet presenteres de teoretiske begrepene som forklarer hedonisk prismodell,

prisdiskriminering, verdibasert prissetting, elastisitet og relasjon mellom tilbud, etterspørsel og pris. Videre presenteres datasett og den spesifiserte modell for analysen. I forbindelsen med utvalgt modell gjennomføres tester for en beste kombinasjon av variabler, modellens forutsetninger og uttrykk. I kapittelet med presentasjon av resultater diskuteres regresjonsresultater, funnene fra optimal beregning av bestillingstidspunktet og priselastisitetene. I siste konklusjonsavsnittet oppsummeres hovedfunnene med studien og implikasjoner for praksis og videre forskning.

## 2. Bakgrunn

Den moderne cruise industrien har startet på slutten av 1960-tallet. Blant de første etablerte cruiselinjene er kjent Norsk Cruise, Royal Caribbean International og Carnival Cruise. Med oppstart primært som aktivitet for elite, har cruise industri utviklet seg med fokus på større marked. Både bygging av større fartøy og utvikling av om bord aktiviteter var store bidrag til disse endringer (Rodrigue & Theo Notteboom, 2012). I tillegg har bransjen benyttet seg av samarbeid med hotell, fly, bilutleiefirmaer og ulike kulturinstitusjoner (Vogel, Papathanassis & Wolber, 2012).

Cruisenæring i Norge har en lang historie over 125 år, med oppstarten av turisme trafikk fra Vestlandet, som er fortsatt blant de mest populære landsdelene for cruise i Norge (TØI, 2015). På grunn av skipsutstyrets utvikling og tilpassing til vintersesong, har seilingens muligheter spredt over hver årstid i løpet av de siste 10 år (TØI, 2015). Derimot forblir sektoren svært elastisk og opplever etterspørsel svingninger i andre sesonger enn sommer, mens august er en av de mest populære månedene for ferie for mange land (TØI, 2015). Klima og miljø, infrastruktur og opphoping av mennesker i samme steder er generelt de faktorene som senker etterspørsel etter norske cruise (Innovasjon Norge, *Nøkkeltall cruise 2015*). Inntekt, valutakurs og markedsføring av Norge som turistland kan også nevnes som viktige påvirkende faktorer (TØI, 2003).

### 2.1 Hurtigruten

Hurtigruten AS har operert 123 år i cruisebransjen med seilinger til norske og utenlandske destinasjoner (Norlands forskning, 2013). Fra 1990-årene til begynnelsen av 2000-årene har Hurtigruten vist en stor vekst i kapasitet og trafikkutvikling (TØI, 2002). Hurtigruten skiller seg ut fra konkurrenter ved å tilby unike kulturelle og naturopplevelser, såkalt *ekte opplevelser i unike farvann* (Hurtigruten, *Årsrapport 2011*, s.34). Smaking av tradisjonell mat, historiefortelling, konserter, fiskeri og kajakkpadling, også eksotiske opplevelser på utflukter som snøscooterturer og hundekjøring er eksempler på dette. Det er noe som kan antas å danne en oppfatning om Hurtigruten, og dermed påvirke kundes forventninger og evaluering ifølge forskning om merkebares virkninger på forbrukernes cruise vurdering (Ahmed, Johnson, Pei Ling, Wai Fang & Kah Hui, 2002). Det er viktig å legge merke til at

kapasitetsutnyttelse varierer gjennom forskjellige sesonger. Fra mai til august øker etterspørsel etter Hurtigrutens reiser, derimot utnyttes kapasiteten i øvrige måneder mindre. Fokuset dermed ligger på flere tiltak, som produktutvikling, markedsføring og mer differensiert prising som kan bidra til økt lønnsomhet i lavsesongene (Hurtigruten, *Årsrapport 2011*).

Produktområdene består av fire del med Hurtigruten norskekysten, Explorer-produkter/MS Fram, Spitsbergen og Charter, og andre aktiviteter samlet i Øvrig virksomhet. Cruisene er en kombinasjon av turisme og lokaltransport, rettet mot ferie- og fritid, kurs- og konferanse, distansetraffikk og godstransport. De omfatter offentlig sektor og private personer, turister fra Norge og utlandet, hvorav Tyskland, Norge, Storbritannia, USA, Frankrike og Sverige presenterer de største markedene (Hurtigruten, *Årsrapport 2011*).

Denne oppgaven fokuserer på cruise rute mellom Bergen og Kirkenes som var etablert på slutten av 1800-tallet (Hurtigruten, 2016d). Ruten har vært en del av Hurtigruten kjernevirksomhet og et viktig satseområde, vunnet anbud siden 2011 (Hurtigruten, *Årsrapport 2011*). Ruten anløper 34 havner, og deles i nordgående reise på 7 dager, fra Bergen havn til Kirkenes havn, pluss Geiranger om sommer eller 6 dagers reise med sørgående retning mot Bergen, også rundreise på 12 dager. En hel eller halv rundreise kan kjøpes som et pakkeprodukt inkludert lugar og måltider om bord. Mens distansereiser presenterer alle andre reiser (TØI, 2002). Uansett årstiden på seilingen, tilbyr Hurtigruten alltid noen unike naturopplevelser. Da vintersesong preges med utsikter over hvit landskapet, og det økes tilbud på ulike utflukter som hundesledekjøring, hvalsafari og snøscooter-turer. På vårsesongen kan kontraster i årstider mellom Sør- og Nord-Norge oppleves. Om sommeren kan en passasjer oppleve den blomstrende norske naturen i kombinasjon med hvalsafari, RIB-eventyr, kajakkpadling, fottur og midnattskonsert. Mens høstsesong preges av fargerike utsikt og er en begynnende sesong for nordlys opplevelser (Hurtigruten, 2016a,b,c).

Basert på tidligere forskning, er valg av destinasjon et av viktigste faktorene, påvirkende reises lengde av internasjonale turister i Norge. Dette omfatter at turister til nord delen av landet har tendens til å ha en lengre reise i forhold til reiser til sør delen av landet (Alizadeh Ashrafi & Myrland, 2016). En annen undersøkelsen var gjennomført om bord på Hurtigruten cruise mellom Bergen og Kirkenes blant norsktalende distansepassasjerer i tidsrommet mellom september og oktober 2002 (TØI, 2002). Det ble fant ut at en høy andel

av passasjerer på lange reiser valgte Hurtigruten cruise på grunn av reiseopplevelsen. Mellom Bodø og Tromsø valgte mange reise på grunn av prisen. Mens pris og tungvinte alternativ spilte en mindre rolle i valg av reise jo lenger sør seilingen går (TØI, 2002).

### 3. Teoretisk rammeverk

Dette kapittelet danner fundament for den empiriske analysen. Det omfatter økonomiske begrepene som forklarer hedonisk prismodell, prisdiskriminering, verdibasert prissetting og elastisitet. Jeg også drøfter kausal sammenheng mellom tilbud-etterspørsel og deres relasjon til pris, som danner grunnlag for tolkning av resultater.

#### 3.1 Hedonisk prismodell

I oppgaven benyttes en hedonisk modell, også omtalt som en invers etterspørsel modell. Modellen estimeres med bruk av OLS metoden, som tar eksogenitet av forklaringsvariabler til betraktning. Den store bidrag til utviklingen av modellen var gjort av Lancaster (1966) og deretter var videreutviklet av Rosen (1974). Lancaster var den første som undersøkte at kundes forbruksvalg baseres heller på karakteristikk ved et produkt. Han hevdet at kundes preferanser eller nytte rangerer produkts karakteristikk direkte mens selve produkter indirekte gjennom deres karakteristikk. Dermed med å observere kundes innkjøpsmønster kan det være mulig å undersøke hvilken kolleksjon av karakteristikk øker kundes betalingsvillighet. Modell kan uttrykkes på en generell form, hvorav pris er en funksjon av produkts karakteristikk:

$$[1] \quad P_j = f(z_1, \dots, z_n),$$

Flere tidligere undersøkelser fant ut eksistensen av produkts karakteristikk samtidig som de ble ikke inkludert i konsumentteori. Lancasters teoretisk tilnærming skiller seg med følgende forutsetninger. For det første, foreslo han at karakteristikk ved produkt påvirker nytte til kunde. For det andre, har hvert produkt generelt en bunt av karakteristikk. Og i det siste, at karakteristikk av produkter i kombinasjon skiller seg fra deres individuelle karakteristikk.

Hedonisk modell har blitt kritisert for flere svakheter, som er viktige til å nevne før implementeringen. For det første, kan et eksisterende kausalitet problem mellom pris og etterspørsel føre til spuriøs korrelasjon mellom variabler. For det andre, kan kollinearitet problem mellom variablene føre til svingninger av parameterestimatene (Burgess & Harmon, 1991).

Med å oppsummere, kan det teoretiske målet av modellen sees i sammenheng analyse mellom markedslivevektspriser og produsent kostnader eller kundes preferanser (Nesheim, 2006). Med utgangspunkt i problemstillingen og datasettet, omhandler analysen i denne oppgaven snarere forhold mellom pris og kundes preferanser, med antagelsen for konstante kostnader.

### 3.2 Verdibasert prissetting

Før diskusjon av prisdiskriminering, en benyttet strategi i cruisebransjen, er det viktig å nevne verdibasert prispolitikk som ofte drøftes i samme kontekst. Prisfastsettelse består av komplekse mekanismer, der det skilles mellom tre hoved former for prissetting verdibasert, kostnadsbasert og konkurransebasert (Liozu & Hinterhuber, 2013). På bakgrunn av dataen, baserer oppgaven seg på verdibasert prissetting. Den har hovedfokuset på forståelse og identifisering av lønnsomme måter å øke kundens betalingsvilje mellom markedssegmenter, påvirkning på kundens priselastisitet og sørge for at kunden får en positiv verdi (Liozu & Hinterhuber, 2013).

Verdibasert prispolitikk inkluderer et viktig begrep dynamisk pris, som ofte inkluderes i kontekst med prisdiskrimineringsteori. Til tross av sitt viktig bidrag til fremgang av prisdannelse, har dynamisk pris sin svakhet i begrenset evne å justeres kontinuerlig i den forstand at det eksisterer en tidsavhengig respons mellom pris virkning på etterspørsel og mellom kundes atferdsmessige justeringer til prisendringer. Av den grunn kan pris respons være sett snarere som *attempts to regain or consolidate market share* (Tirole, 1988, s. 254). På bakgrunn av disse prisstivheter kan det ofte observeres at gårsdagens priser påvirker dagens overskudd (Tirole, 1988).

### 3.3 Prisdiskriminering

Prisdiskriminering har blitt et viktig verktøy i prispolitikk benyttet i cruisebransje. Tredjegrads- og andregradsdiskriminering er best egnet til å beskrive cruisebransjen og dermed skal benyttes som hovedteori for å belyse oppgavens problemstilling.

Teorien innebærer at en aktør med markedsrett kan øke inntekter gjennom differensiering av tjenesten ved betraktning for ulik betalingsvilje og ulike preferanser av konsumenter. En

effektiv bruk av prisdiskrimineringsstrategi setter krav på følgende kriterier (Phlips, 1998; Pigou, 1932): (1) det skal ikke eksistere arbitrasjemuligheter som innebærer videresalg av varer mellom markeder med formål å utnytte prisforskjeller, (2) en virksomhet skal ha en del av monopolmakt som kan vises med etterspørselskurven, skrånende nedover. Kurven illustrerer et invers forhold mellom pris og etterspørsel, basert på tre effekter, hvorav inntektseffekt beskriver at økning i konsumentens inntekt fører til økt kjøpsvilje. Substitusjonseffekt viser vridning i etterspørsel når konsumenten begynner å kjøpe mer av en billigere vare og mindre av en dyrere. Avtagende grensenytte illustrerer at forbrukerens nytte faller ved mer konsum av en vare på grunn av redusert behov for den.

Det skilles mellom tre grader av prisdiskriminering, hvorav førstegradsprisdiskriminering (perfekt) innebærer at en virksomhet selger identiske varer til forskjellige priser. Ved å sette den høyeste prisen konsumentene er villige til å betale (Varian, 1989; Phlips, 1998) kan virksomheten tilegne seg hele konsumentoverskuddet.

Andregradsdiskriminering innbefatter at en aktør med markedsrett tilbyr en bunt av varer, ulike i kvantitet eller kvalitet med formål å diskriminere mellom typer kunder. Dette omfatter at enheter med betalingsvilje større enn  $P_i$  blir solgt til den prisen, hvorimot med en betalingsvilje mindre enn  $P_i$  og større enn  $P_j$  blir solgt til  $P_j$ , hvorav  $i \neq j$  (Phlips, 1998). På den måten setter en aktør med markedsrett begrensninger for såkalt selvseleksjon prosess (Tirole, 1988; Borenstein & Rose, 1991). Prisdiskriminering kan også bruke tidssegment grunnet ulike konsumentenes tidspreferanser (Tirole, 1988). Konsumentene er ofte usikre i verdivurdering av en tjeneste, hvor forbruket vil skje i framtiden. En viktig forutsetning for at bruk av tidssegmentet skal være lønnsom i praksis er konsumentenes ulike forventede verdivurderinger, som gir mulighet for aktøren med markedsrett å tilby lavere priser for kunder med høy forventet verdivurdering som foretar en forhånd bestilling og høyere priser til kunder med lav verdivurdering på et senere tidspunkt (Nocke, Peitz & Rosar, 2011).

Tredjegradsdiskriminering innebærer forskjellige priser til ulike markedssegmenter med formål å tilfredsstille ulike kundenes krav. Maksimeringsløsning finner sted når marginal inntekt er lik mellom markeder og lik marginalkostnaden [4] og profitt funksjon [3] er uttrykt som følgende (Phlips, 1998):

$$[2] \quad P = \sum q_i p_i(q_i) - C(q)$$

$$[3] \quad MR_1 = MR_2 = MR_i = MC$$

Dette følger til konklusjon at for å nå likevekt i ligningene kreves dermed av aktør med markedsmakt å pris diskriminere ulike kundegrupper.

### 3.4 Elastisitet

Elastisitet er et økonomisk begrep som brukes til måling av en variabels følsomhet til endring av en annen variabel. I oppgaven bruker jeg begrepet til å observere forholdet mellom pris og etterspørsel i form av egenpriselastisitet som indikerer hvor mye kvantum av en vare har endret seg i forhold til endret pris. Den kan uttrykkes på en følgende måte:

$$[4] \quad \varepsilon_i = \frac{dq_i}{dp_i} \times \frac{p_i}{q_i}$$

Beregnet forholdstall fra ligning [4] angir at etterspørsel er elastisk når  $\varepsilon_i < -1$ ,  $-1 < \varepsilon_i < 0$  uelastisk eller relativt uelastisk mens enhetspriselastisk når  $\varepsilon_i = -1$ .

Etterspørsel elastisitet kan bli beregnet både på gjennomsnittlig verdi av pris og kvantum på bakgrunn av sitt representativt punkt på regresjonslinjen eller per observasjon. Etterspørsel varierer per punktum langs kurven når absolutte verdier av p og q benyttes, det vil også si at  $\frac{p}{q}$  nærmer seg uendelig grense når q går mot null, og det nærmer seg null grense hvis p går mot null (Heckner & Kretschmer, 2008). I oppgaven vil det være hensiktsmessig å kalkulere elastisitet på gjennomsnittlig verdi, ofte omtalt som arc elastisitet.

Kjennskap til kundenes prisfølsomhet som kan benyttes til beregning av totale inntekter er svært viktig for en bedrift. Avhengig om etterspørsel eller pris viser en større prosentvis endring avgjør i hvilken retning inntekt kan bevege seg (Rittenberg & Tregarthen, 2009). Det innebærer at bedriften kan dra nytte av prissynking med elastisk etterspørsel men vil øke pris i tilfellet med uelastisk etterspørsel for å tilegne seg konsumentoverskuddet. I forbindelse med at endringer i andre faktorer enn pris kan påvirke etterspørsel oppførsel, kreves av bedrift å ha kunnskap til flere eksterne faktorer som kan benyttes til forståelse og påvirkning på elastisitet. Nødvendighetsgrad, forbrukernes lojalitet, inntekt, samtidig kjøp av flere dyre varer kan nevnes som viktige faktorer forårsakende endringer i etterspørsel (Heckner &

Kretschmer, 2008). I forbindelsen med oppgaven er også tidsfaktor en viktig og sentral determinant av etterspørselsvariasjoner. Basert på teori, fører et lengre tidsintervall, avsatt til kundene å reagere på prisendringen til et mer elastisk etterspørsel (Rittenberg & Tregarthen, 2009).

### 3.5 Tilbud - etterspørsel sammenheng

Forholdet mellom tilbud-etterpørsel som er kjent for å ha simultant effekt, har vært et viktig diskutert spørsmål innen økonomi. To franske økonomer, en representant av klassisk økonomi, Jean-Baptiste Say og en representant av neoklassisk økonomi, Leon Walras har presentert to forskjellige teorier.

Ifølge Walras lov skal tilbudsoverskudd (omvendt markeds etterspørselsoverskudd) summeres til null. Det omfatter at likevektspris er et sett med priser som oppnås hvis tilbud er lik etterspørsel (Varian, 1992). Ifølge Says lov, også kjent som loven om markeder, skaper samlede produksjon en lik mengde av samlet etterspørsel. Say har hevdet at problemet med general glut av ulike utsolgte varer kan ikke oppstå, og videre han hevdet at tilfellet av tilbudsoverskuddet av en vare kan forklares med underskuddet av en annen vare (Say & Biddle, 1851). Says lov har fått mye kritikk samtidig som Walras lov har fått en mer utbredt benyttelse i det moderne økonomi.

På bakgrunn av problemstillingen i oppgaven og metodiske vanskeligheter med tilbuds analyse (Brækkan, 2014), blir det hensiktsmessig å fokusere på relasjon mellom pris og etterspørsel. Til tross for at pris endringer kan være forårsaket av samtidig skift i tilbud-etterpørsel, som gjør det vanskelig å bestemme en eksakt virkning fra hver av de skiftene (Brækkan, 2014). Blant de kjente faktorene som forårsaker etterspørsel skift er inntekt, pris på substitutter og komplementære varer. Derimot når disse faktorer kan ikke forklare etterspørsel atferd, kan det antas en virkning av strukturelle endringer i etterspørsel, blant hvilke ofte antas endringer i preferanser. Dermed ufullstendig informasjon om funksjonell form av etterspørsel tillater ikke å avvise en mulig påvirkning av ukjente variabler på etterspørsel (Brækkan, 2014).

#### 4. Presentasjon av data

Markedsdata brukt i den studien er innhentet i januar 2016 fra Hurtigruten AS. Datasettet inneholder 54.750 observasjoner i løpet av 48 månedlige perioder. Hver observasjon tilsvarer avgangstid på cruise rute mellom Bergen og Kirkenes, med oppstart første dag av måned fra januar 2013 til desember 2016. Dette innebærer at tidsseriedata kan benyttes for observasjon av prisendringer på samme cruise rute og cruise karakteristikk over ulike avgangstider.

På bakgrunn av innhentingsdato før avsluttet booking til cruise avganger mellom februar og desember 2016, kan det antas en eksistens av seleksjonsbias i øvrige måneder. Den antagelsen bygger seg på det faktumet at observasjoner har ikke inkludert en del av mindre prisfølsomme kunder med handlemønstre på et senere tidspunkt. Derimot inklusjon av observasjoner fra siste år gir mulighet til å undersøke de nyeste prisendringene. Oversikt over variabler er presentert i tabell 1.

Tabell 1. Sammendrag av statistikk

Variabel	Gjennomsnitt	Standardavvik	Minimum	Maksimum

<i>Nordic</i>	0.187	0.390	0	1
<i>Inside</i>	0.146	0.353	0	1
<i>Outside</i>	0.052	0.500	0	1
<i>Minisuite</i>	0.061	0.239	0	1
<i>Suite</i>	0.067	0.249	0	1
<i>Other</i>	0.205	0.404	0	1

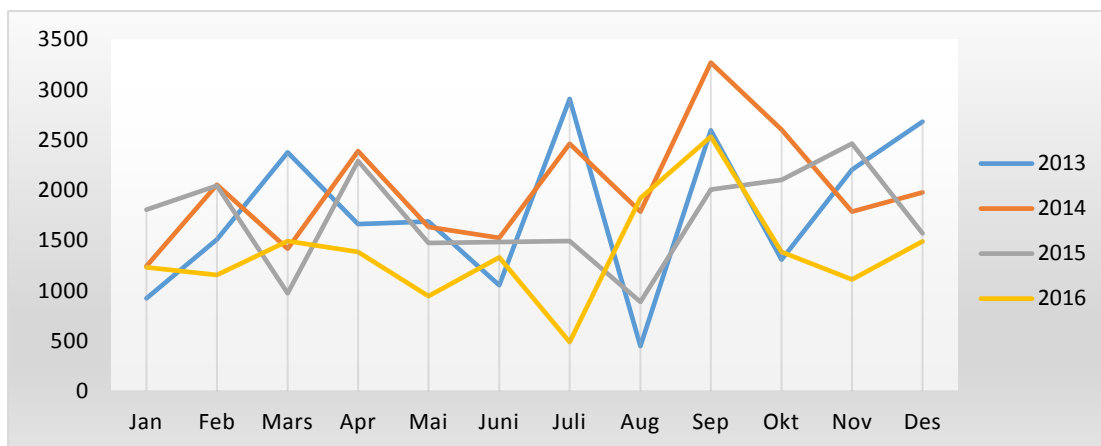

I oppgaven brukes *Price/CN* som er pris på reise delt på cruise natt, målt i norske kroner og *CN* presenterer etterspørsel, målt i cruise netter. Både pris og etterspørsel dynamikk er vist på figur 1. og 2. Dummy variabler er samlet i kategoriske variabler *Direction*, *Market* og *Cabin.Category*, som blir presentert i analysemodellen. Blant *Direction* variabler skilles mellom *North* cruise med nordgående retning, *South* cruise som sørgående reise og rundtur definert som *NorthSouth*. *Market* variabler presenterer følgende land som UK & ROW, USA, Frankrike, landene i Norden og CE ekskludert Frankrike som inkluderer Tyskland med 90% andel, Belgia, Nederland, Luxemburg, Sveits og Østerrike. Oversikt over fordeling av passasjerer mellom markeder er vist i tabell 2.

Tabell 2. Fordeling av passasjerer mellom markeder på cruise rute mellom Bergen og Kirkenes. Kilde: markedsdata Hurtigruten 2013-2016

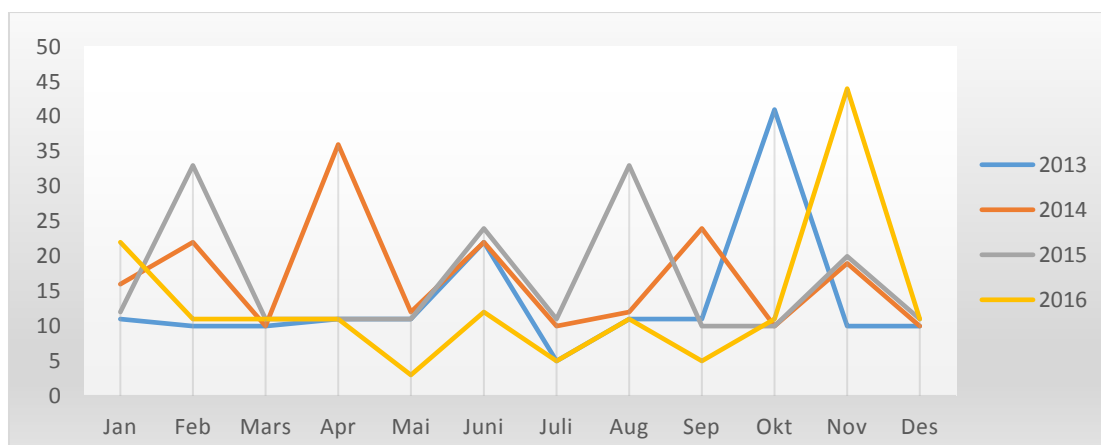

Prosentvis markedsfordeling	2013	2014	2015	2016
UK & ROW	25%	24%	20%	20%
USA	9%	9%	9%	7%
Frankrike	7%	7%	6%	3%
CE eks Frankrike	38%	41%	47%	52%
Norden	22%	19%	18%	18%

*Cabin.Category* differensieres mellom fire typer. *Inside* er beskrevet som lugar uten vindu med separate senger, bad, mulig tilstedeværelse av sofa og over- og underkøye. *Outside* har vindu, separate senger, bad, mulig tilstedeværelse av sofa. *Minisuite* er kjennetegnet som en stor lugar med sittegrupper med TV, bad, mulig tilstedeværelse av minibar, begrenset utsikt, dobbeltseng og separate senger. *Suite* er presentert som lugar med ett eller to rom, sittegrupper med TV, bad, stereo, balkong eller karnappvindu, dobbeltseng, sikkerhets boks, mulig tilstedeværelse av minibar og badekar (Hurtigruten, 2013). Mens *Other* presenterer alle andre lugartyper.

I tillegg har jeg lagd variabelen *time.to.leave* som måler tidsintervall i antall dager mellom bestilling og avgang som gir grunnlag til å analysere nedsatt pris, tilbudt ved en tidlig bestilling. Det er viktig å legge merke til forskjellige måleskalaer mellom variablene, der avgang er målt månedlig og bestilling daglig, noe som kan påvirke resultatene.

## 5. Analysemodell

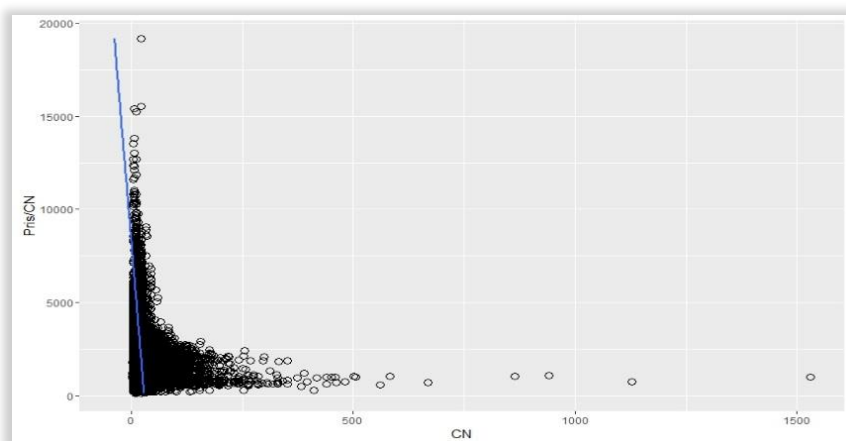

Etter tilsetning av variabler i hedonisk regresjonsligning, kan en følgende modell spesifiseres:

$$[5] (Price/CN)_t = \beta_{1,t} + \beta_2 CN_t + \delta_1 Direction_t + \delta_2 Market_t + \delta_3 Cabin.Category_t + \beta_3 time.to.leave_t + \beta_4 time.to.leave_t^2 + e_t$$

Modellen bruker tidsdimensjon i den forstand at ligning [5] estimeres med hensyn til per månedsavgang, hvorav  $t$  ( $1, \dots, 48$ ) symboliserer den spesifikke måneden. I den likningen er  $Price/CN$  en avhengig variabel mens  $CN$ ,  $Direction$ ,  $Market$ ,  $Cabin.Category$ ,  $time.to.leave$ ,  $time.to.leave^2$  er forklaringsvariabler som måler endring i responsvariabel over tid. Konstantleddet  $\beta_{1,t}$  presenterer pris på *France*, *North* og *Inside* over tid. Disse variablene er valgt som basis på bakgrunn av valg kriterier i dummy variabel koding (Cohen, West & Aiken, 2013). Bruk av  $time.to.leave$  i kvadratisk form er gjort med hensyn å gi en bedre forståelse på sammenheng mellom pris og variabelen. Det forventes å observere en avtagende avkastning i den forstand at prisrespons blir mindre med økning av tidsintervallet. På figur 3 vises en sammenheng mellom  $Price/CN$  og  $time.to.leave$  og på figur 4 mellom  $CN$  og  $Price/CN$ .

Figur 3. Lineær sammenheng mellom  $time.to.leave$  og  $Price/CN$

Figur 4. Lineær sammenheng mellom  $CN$  og  $Price/CN$

Videre, representerer feilleddet  $e_t$  en uforklarende varians i modellen. Forklaringsgraden  $R^2$  benyttes med hensyn til å vise hvor mye av variasjonen i responsvariabel forklares med prediksjonsvariabler. På bakgrunn av  $R^2$  evne å øke med utviding av modell med flere variabler, benyttes ofte justert  $R^2$  som et mål på forklart varians (Hill, Griffiths & Lim, 2008).

### 5.1 Testing av modellens uttrykk og forutsetninger

I det avsnittet først sammenlikner jeg to modeller med hensyn å velge en beste kombinasjon av variabler. De følgende modellene er vist under:

$$[6] \quad (Price/CN)_t = \beta_{1,t} + \beta_2 CN_t + \delta_1 Directionroundtrip_t + \delta_2 Market_t + \gamma_1 (CN_t \times Market_t) + \gamma_2 (Market_t \times Directionroundtrip_t) + \delta_3 Cabin.Category_t + \beta_3 time.to.leave_t + \beta_4 time.to.leave_t^2 + e_t$$

$$[7] \quad (Price/CN)_t = \beta_{1,t} + \beta_2 CN_t + \delta_1 Direction_t + \delta_2 Market_t + \delta_3 Cabin.Category_t + \beta_3 time.to.leave_t + \beta_4 time.to.leave_t^2 + e_t$$

De to ligningene skiller med tre nye variabler, hvorav *Directionroundtrip* er en dummy variabel for rundreise,  $(CN \times Market)$  og  $(Market \times Directionroundtrip)$  er interaksjonsvariabler. Fordel med tilsetning av nye variabler kan være sett i observasjon av pris effekter i tilknytting til hver marked og økt fokus på pris måling av lang cruise. Derimot

basert på resultater vises at *USA* mangler observasjoner for å fange opp interaksjonseffekter, i tillegg til at fleste estimerte koeffisientene vises å være ikke signifikante blant de nye variablene.

Både Akaike informasjons kriterie (AIC) og  $R^2$  brukes som vurderingskriterier, hvorav AIC er siktet mot å «straffe» log likelihood for en mer kompleks måte å oppnå en mer objektiv vurdering av modellen (Harrell, 2015). Basert på regresjonsresultater vises at modell med interaksjonsvariabler [6] har en lavere AIC på 795.1312 i forhold til andre modell [7] på 797.2392. Videre  $R^2$  på 78.1 % indikerer at nye variabler bidrar til økt forklaringsgrad av modellen i forhold til den andre modellen på 72.7 %. Derimot indikerer en liten differanse mellom justert  $R^2$  verdier på 67.2 % og 64.1 % om like bra forklaringsgraden mellom modellene. Til tross for test resultater, skal en kombinasjon med nye variabler ikke brukes i analysen. Det kan nevnes flere grunner som manglende observasjoner og manglende signifikans mellom variablene, også økt standardfeil på de resterende estimerte koeffisientene.

I det andre steget ble modellens forutsetninger testet. Varians inflasjon faktor (VIF) var brukt å undersøke kollinearitet mellom variabler. Det viste seg at *CN*, *Direction*, *Market*, *Cabin.Category* er moderat korrelerte med i det minste en av forklaringsvariablene, hvorimot *time.to.leave* høy korrelert. Dette kan forklares med bruk av kvadratisk form i modellen. For å teste hvorvidt variansen til feilleddet avhenger av forklaringsvariabler ble Breusch-Pagan test brukt. P-verdien på 0.2532 indikerer på at nullhypotesen med antagelsen om homoskedastisitet kan ikke bli forkastet.

Tabell 3. Varians inflasjon faktor test

<u>Variabelnavn</u>	<u>Koeffisient</u>
<i>CN</i>	2.036158
<i>Direction</i>	2.611186
<i>Market</i>	3.715889
<i>Cabin.Category</i>	2.664681
<i>time.to.leave</i>	10.886697
<i>time.to.leave</i> <sup>2</sup>	11.106209

Tabell 4. Breusch-Pagan test

<u>Test</u>	<u>Frihetsgrader</u>	<u>Statistikk</u>	<u>P-verdi</u>
BP	13	15.925	0.2532

## 5.2 Hypotesetesting

Den første hypotesen vil teste hvorvidt det eksisterer en sammenheng mellom variablene etterspørsel og pris. Null- og alternativ hypotese er testet med benyttelsen av t-test og er formulert som følgende:

$$[8] \quad H_0: \beta_2 = 0, \quad H_1: \beta_2 \neq 0$$

Basert på resultater fra tabell 5. kan det observeres at sannsynlighet for ingen sammenheng mellom variablene er lik 0.89 % som gir en bakgrunn til å forkaste nullhypotesen og dermed konkludere at etterspørsel er egnet å forklare variasjon i pris.

Tabell 5. Lineær hypotesetest

<u>Nullhypotesen (<math>H_0</math>):</u>	<u>P-verdi</u>
$\beta_2 = 0$	0.008977

I neste steg har jeg valgt å teste signifikansen av teoretisk optimal verdi av *time.to.leave* som har vært funnet med å sette marginal effekt av variabelen lik null og holde de andre variablene konstant (Hill et al., 2008):

$$[9] \quad \beta_6 + 2\beta_7t = 0$$

Jeg har benyttet delta metoden, som diskuteres i neste avsnitt til å finne standardfeil som er lagt til grunnlag av beregning p-verdien for hypotesetest samt beregning av 95% intervallestimatet. På bakgrunn av måling av *time.to.leave* i antall dager, har jeg valgt å bruke heltall i testen. Null- og alternativ hypotese er formulert på en følgende måte:

$$[10] \quad H_0: \beta_6 + 32\beta_7 = 0, \quad H_1: \beta_6 + 32\beta_7 \neq 0$$

P-verdien har vært kalkulert på 0.9984, som er høyere enn signifikansnivå på 5%. Dette fører til å beholde nullhypotesen og dermed konkludere at en gitt optimal verdi er forenelig med dataen. Jeg bruker det samme prinsippet for å finne optimale verdier på de resterende sesonger som blir diskutert i del 6.2.

### 5.3 Delta metoden

I dette avsnittet presenterer jeg delta metoden som en fremgangsmåte å finne standardfeil på for en ikke lineær funksjon av  $t = -\beta_6/2\beta_7$  samt elastisitet funksjon som er presentert i 6.3 delen av oppgaven. Metoden bruker Taylor-rekke tilnærming for å oppnå en tilnærmet normal fordeling av en ikke lineær funksjon og kan generelt uttrykkes på en følgende måte (Hill et al., 2008):

$$[11] \quad f(x) \approx f(\mu) + (x - \mu)f'(\mu) ,$$

hvorav  $f(x)$  er en funksjon av  $x_i$  som konverteres til sin sann verdi  $\mu$ . Med å anta at  $f(\mu) = -\beta_6/2\beta_7$  og  $f(x) = -b_6/2b_7$ , kan variansen vises som (Hill et al., 2008):

$$[12] \quad Var[f(x)] = \left(\frac{\partial f(\mu)}{\partial \beta_6}\right)^2 var(b_6) + \left(\frac{\partial f(\mu)}{\partial \beta_7}\right)^2 var(b_7) + 2\left(\frac{\partial f}{\partial \beta_6}\right)\left(\frac{\partial f}{\partial \beta_7}\right)cov(b_6, b_7)$$

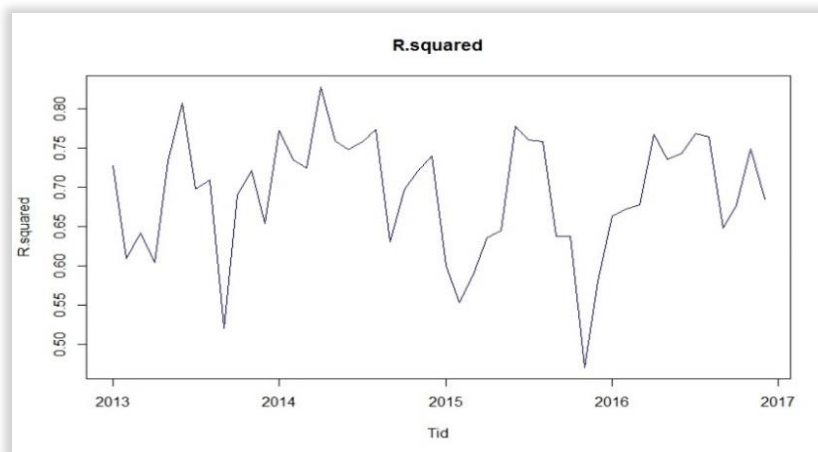

I likning [12] indikerer mindre varians en bedre tilnærming. Da benyttelse av flere observasjoner bidrar til at fordelingen av estimatoren når sanne verdi av en beregnet parameter.

## 6. Presentasjon av resultater

I dette kapitlet presenterer og diskuterer jeg resultater mot det teoretiske rammeverket. Først introduserer kapitlet resultater som framkom fra regresjonsanalyse og fra beregning av optimale tidspunktet for bestilling. Og i den siste delen av kapitlet presenteres priselastisitetene.

### 6.1 Regresjonsresultater

I start av diskusjonen er det viktig å legge merke til  $R^2$  verdier. De viser at modellen forklarer over 50 % av variasjonen i pris for alle månedstidsserier med unntak av November 2015 som er på 47.1 %. Et annet viktig poeng er en høyere  $R^2$  i sommer måneder, noe som tyder på at felles ferienesong er en viktig determinant av en sterkere korrelasjon mellom forklarings- og avhengig variabler. Dette kan føre til antagelsen at sommer sesong har et mer stabilt og lik pris mønster mellom årene.

Figur 5.  $R^2$  verdier som viser mengden av prisvariasjon forklart av modellen per avgangsmåned

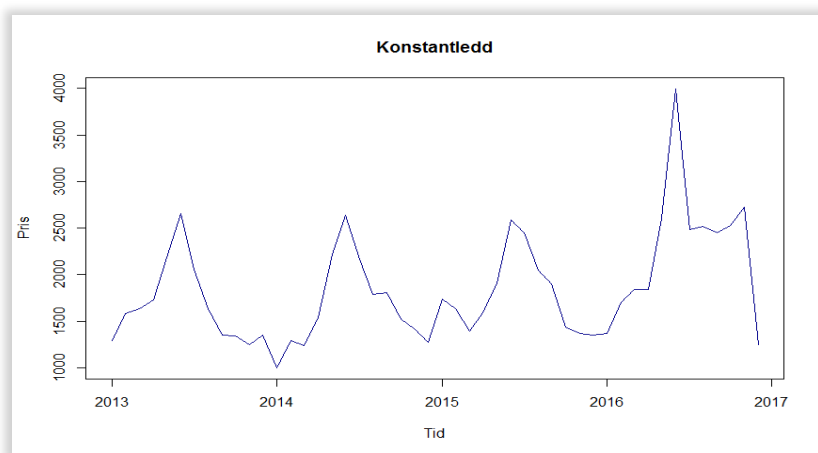

Resultater i dette kapitlet er illustrert på figurer, hvorav [7,8,9] viser estimerte resultater av kategoriske variabler, målt i differansen til sin basis gruppe. Dette innebærer at desto nærmere pris ligger 0 verdi på y-aksen, desto mindre er forskjell mellom grupper. Basert på det faktumet at kapasitetsutnyttelse er høyere i mai-august måneder definerer jeg dem som

høysesong og øvrige måneder som lavsesong. En annen viktig merknad i forbindelsen med diskusjon av resultater er bruk av gjennomsnittsverdi, beregnet på alle månedstidsserier, som representerer en generell effekt gjennom årene.

### ***Konstantledd***

Konstantleddet viser et mønster, der pris i kombinasjon av *France, North, Inside* har en tendens til å øke mot høysesong, primært med kraftig vekst ved overgangen fra april til mai, og deretter falle gradvis mot lav sesong. Videre, preger utvikling en betydelig prisøkning i høysesong 2016, noe som kan indikere relativt økte priser.

Figur 6. Konstantleddet som presenterer pris på *France, North, Inside* per avgangsmåned

### ***Cruise netter***

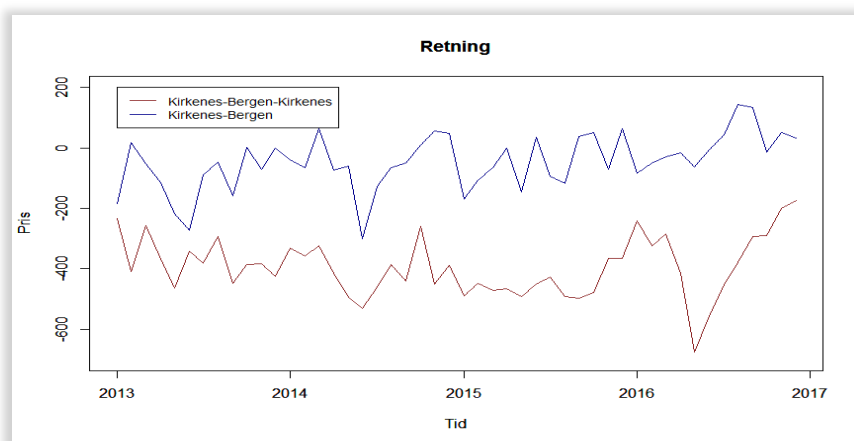

Negative verdier på stigningstallet bekrefter en eksistens av negativ korrelasjon mellom etterspørsel av cruise netter og pris. En større prisendring i forhold til etterspørselsendring observeres i midten av 2013 og 2014 årene. Resultater legger grunnlaget for elastisitetsberegning og dermed diskuteres videre i 6.3 avsnittet.

## ***Retning***

Et viktig poeng ved undersøkelsen er i sammenhengen av pris mellom korte og lange turer. Det viser seg at nordgående turer har vanligvis den høyeste prisen, sørgående turer er som regel relativt billigere, med gjennomsnittlig på 47 norske kroner og rundreiser har det beste pristilbud med å være gjennomsnittlig billigere på 395 norske kroner relativt til nordgående turer. En kan legge spesielt merke til store månedlige variasjoner både på pris på rundcruise og sørgående tur, med en felles kraftig prisnedgang i midten av 2014. Videre vises at prisutvikling ikke er lik mellom turer, der pris til sørgående cruise viser en trend med økning fra 2015 mot 2017, hvorimot pris på rundtur har hatt først nedgang i begynnelsen av 2016 og deretter viser en økning mot 2017.

I lys av prisdiskrimineringsteori kan den type differensiering henvises til kvalitet og kvantitet. Basert på felles prisøkning mot 2017, kan det generelt antas en relativt økt kostnadsnivå på cruise mellom Bergen og Kirkenes i tiden framover. Derimot, forblir pris på rundreise som den laveste mellom tre typer av retning og sørgående relativt billigere i forhold til nordgående. Med å ta utgangspunkt at etterspørsel avspeiler pris, kan en mulig forklaring være at nordgående cruise er de mest populære og indikerer sterke preferanser av turister til den type tur. Dermed må prisen justeres på andre cruise retninger for å fordele etterspørsel likt mellom turene. Derimot er det viktig å legge merke til at mindre pris forskjell mellom sørgående og nordgående turer nærmere 2017 kan være et kjennetegn på mulige endringer fremover.

Det kan oppsummeres at i sammenligning med tidligere forskning gjennomført av TØI (2002) vises det at turistens valg av nordgående cruise eller høyt etterspurt trafikk av distansepassasjerer baseres snarere på sterke preferanser enn lav pris.

Figur. 7 Differensiert pris på retning av cruise per avgangsmåned

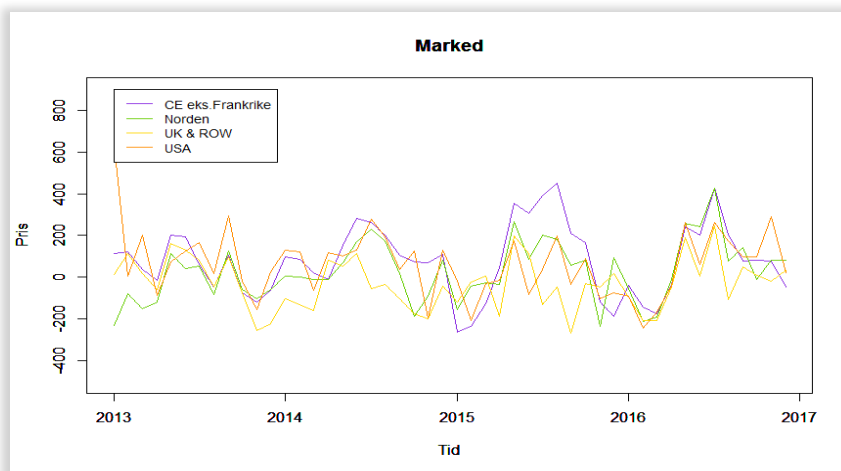

### **Marked**

Differensiering mellom markedssegmenter er et viktig strategi som cruise selskap kan bruke å håndtere kundes ulike betalingsvilje på. En utfordring forbundet med den typen prisdifferensiering kan være høy vanskelighetsgrad av måling ulike makroøkonomiske forhold som kan forårsake etterspørselssjokk som ytterligere fører til prisjusteringer. I tillegg kan nevnes prisens begrenset evne å justeres kontinuerlig.

Dermed kan prisens atferd være sett snarere som dynamisk. Denne tankegang samsvarer med tidligere forskning om pris i flysektor som har en del lignende karakteristikk med pris i cruise sektor. Det var fant ut av Escobari (2012) at pris har en sterk respons på endring ved salgsmønsteret. Et godt eksempel som kan muligvis bevise hvordan etterspørsel svingninger forårsaker ytterligere prisjusteringer er oljekrisen i 2014 og henholdsvis en svekket norsk krone. Det er rimelig å anta at på den ene siden har den ført til relativt økt kjøpekraften til utenlandske turister som bidro til økt etterspørsel (Innovasjon Norge, 2015). På den andre siden kan det tenkes at kjøpekraften til norske turister ble svekket på grunn av økt arbeidsledighet og lavere lønnsveksten (SSB, 2014). Basert på resultater, kan man observere prisjusteringer i midten av 2014 på flere typer av differensiert pris.

Stor antall av estimerte koeffisientene på variabler inkludert i *Market* kategori er ikke signifikante som indikerer at modellen har ikke den beste tilpassing til å sammenligne markedspriser. Basert på signifikante resultater, kan det observeres at både CE eks. Frankrike

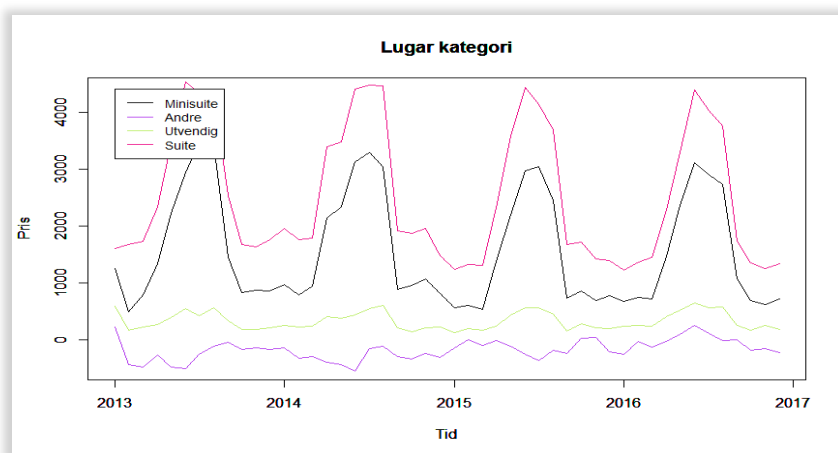

og USA er de dyreste markeder, hvorimot UK & ROW og landene i Norden får relativt billigere pris i forhold til Frankrike. Det kan også nevnes at til tross for en av høyeste prisene blant alle markeder, presenterer CE ekl. Frankrike den største andelen på cruise. Videre, kan man skille mellom følgende pris tendenser. For det første, viser pris et mer stabilt høysesong mønster blant alle markeder, noe som kan bekrefte min antagelse om varmt vær som et viktig faktor bak mer stabil pris. For det andre, er dette mønsteret mer synlig mellom 2014-2016 årene. Derimot som har vært diskutert kan det ikke utelukkes en mulig påvirkning av ukjente variabler på markeds etterspørsel og dermed bidra til endring i fremtidspris.

Figur 8. Differensiert pris på markedssegment per avgangsmåned

### ***Lugar kategori***

Videre kan en rangering av pris mellom lugartyper analyseres, der suite vises å være den dyreste, minisuite relativt billigere, mer billigere utvendig mens innvendig sammen med andre kategori er blant de billigste. Samtidig tyder resultatene på at pris på minisuite beveger seg i takt med suite. Prisdifferansen mellom kategorier ligger gjennomsnittlig på 1000 norske kroner og viser tendens å øke i høysesong. Til slutt, kan konkluderes at differensiert pris på lugar viser seg å være stabil, unntatt den andre kategori.

Figur 9. Differensiert pris på lugar kategori per avgangsmåned

### ***Tid av bestilling***

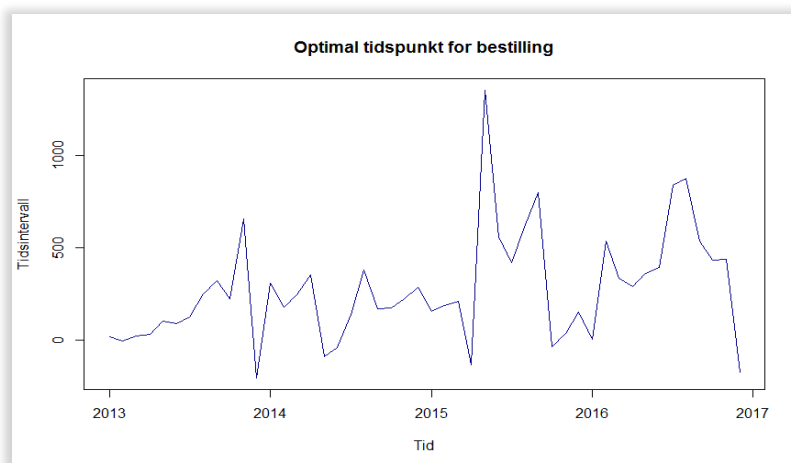

En siste sett med resultater som kan presenteres er regresjonskoeffisienter av *time.to.leave*, hvorav 32 signifikante verdier bidrar til å danne forhold mellom pris og tid av bestilling. Mine forventninger om avtagende avkastning i forbindelse med tilsetning av  $time.to.leave^2$  til modellen har ikke vært møtt i alle måneder. Dermed kan det være mer hensiktsmessig å bruke regresjonsresultater som grunnlag for å finne optimale verdier i neste avsnitt og dermed diskutere resultater som kan mer beskrive forhold mellom variablene.

## **6.2 Optimal tidspunkt for bestilling**

Benyttelse av nedsatt pris for en tidlig bestilling kan være sett som et verktøy bedrift kan bruke til å sikre en del av fyllingsgrad på seilingen og på den måten redusere usikkerhet relatert til etterspørselsgrad. Dette kan sees i lys av elastisitetsteori, der kunder er mer prissensitive på langt sikt på grunn av et større utvalg på substitutter og dermed trenger en pris kompensasjon for tidlig bestilling. På den andre siden, kan det diskuteres at pris spiller en viktig rolle i evaluering av turen. Funnene fra tidligere forskning har vist at det er en fordel for cruise selskap å ha mindre prissensitive kunder på grunn av høye inntekter fra om bord salg mens fordel med prissensitive kunder kan være sett i deres positivt evaluerte av reise

(Petrick, 2005). Fra det synspunktet, bidrar tilbud av lavere pris på cruise mellom Bergen og Kirkenes til kundes positiv oppfatning av reise og dermed skaper et bra rykte for selskapet. Det finnes en generell oppfatning at en tidligst bestilling resulterer i den laveste prisen. Derimot kan ikke resultater fra regresjonsanalyse bekrefte dette utsagnet. Negative koeffisienter på noen av avganger antas på grunn av ulike måling skaler mellom variablene, som har vært forklart i data presentasjonen. Dette fører til konklusjon at oppnåelse av mer pålitelige og nøyaktige resultater krever mer relevant data og en avansert målingsmetode for den type forskning.

Basert på resultatene er det naturlig å anta at optimal tidspunkt for bestilling avhenger av sesong, år og etterspørsel nivå, men en entydig konklusjon kan ikke gjøres. For det første, viser det seg at det har blitt mer lønnsomt å gjøre tidlig bestilling for avganger 2015 og 2016 enn i øvrige år, som kan være sett i sammenheng med observerte relativt høyere priser. For det andre, kan en tidlig bestilling være lønnsom for avganger i høysesong, primært for august måned. Man bør ta i betraktning en muligens kortere salgsperiode med nedsatt pris til avganger i høysesong. Dette kan forklares med at en raskere påfylling til lavere pris begrenser produsentens muligheter til å godta booking forespørsler til en høyere pris i fremtiden. Med andre ord, har bruk av nedsatte priser mest betydning i lavsesong, som et verktøy til å avlede en del etterspørsel fra høysesong til lav (Gale & Holmes, 1993).

Figur 10. En optimal bestillingskurve per avgangsmåned, målt i antall dager

### 6.3 Priselastisitet

For å kalkulere elastisitet har jeg totaldifferensiert elastisitetsformel som kan vises på en følgende måte:

$$[13] \quad \varepsilon_i = p / (q^2 b_2 + p)$$

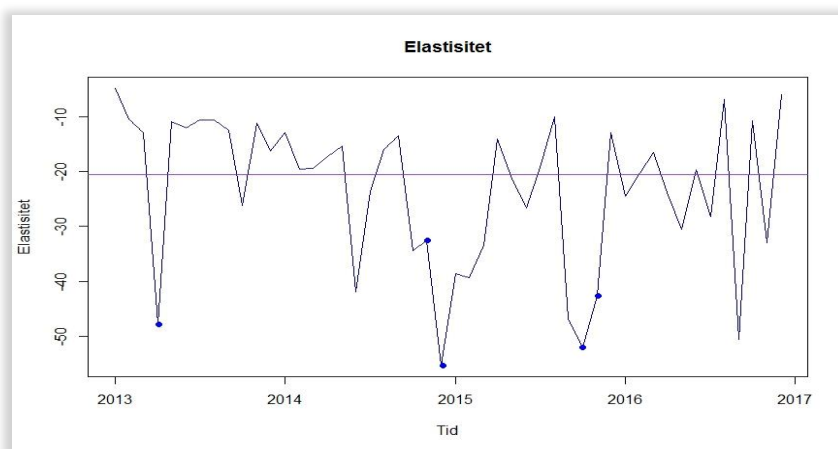

I likningen over symboliserer  $b_2$  en estimert regresjonskoeffisient (stigningstall). Som har vært diskutert i teoridelen, beregnes elastisitet på gjennomsnittlig verdi av *Pris* på 26898 og *CN* på 19. Dette innebærer at elastisitet variasjoner avhenger av verdier på stigningstallet som avslør hvordan forholdet mellom pris og etterspørsel utvikler seg over tid. På bakgrunn av endogen pris i modellen, fører variasjoner i prisnivået, presentert i regresjonsanalyse til sterk etterspørsels reaksjon på prisendring. Dermed kan egenpriselastisiteten ikke være konstant med bruk av utvalgt modellen.

Grunnlag for beregning av elastisitet på et aggregert nivå av etterspørsel har vært i liten antall observasjoner av USA og Frankrike markeder i noen måneder. Av den grunn har det vært hensiktsmessig å finne markeds gjennomsnittlig elastisitet for å kunne sammenligne graden av prispfølsomhet mellom segmenter. Resultater synliggjør at land i Norden og CE eks. Frankrike er blant de mest elastiske. Grunnen til høy prispfølsomhet av skandinaviske naboland kan være i god kjennskap til prisnivå og flere substitutter på innenlandsmarkedet mens høye elastisiteter på CE ekskludert Frankrike kan være på grunn av høye priser.

På bakgrunn av beregnet standardfeil kan jeg konkludere at elastisitetene på -47.78 for april 2013, -32.59 for november 2014, -55.28 for desember 2014, -52.08 for oktober 2015 og -42.60 for november 2015 ikke indikerer om høy signifikansen, dermed har jeg valgt å ekskludere disse månedene fra beregning av gjennomsnittet og videre tolkning. Priselastisitet varierer mellom -4.91 og -50.60, hvorav gjennomsnittsverdi ligger på -20.63.

En kan legge spesielt merke til at elastisitetene i denne studien viser en stor variasjon mellom årene. Derimot observeres høysesong som minst elastisk, med unntak på 2014, noe som kan antas å ha sammenheng med oljekrisen. Blant minst elastiske månedene kan nevnes august, som er ikke en overraskende funn siden det er den mest populære tiden for ferie for mange land.

Resultater kan være sett på som en interessant funn, da elastisitet i cruisebransje er lite forsket på empirisk. Tidligere forskning som har undersøkt priselastisitetene mellom fly ruter har vist at variasjon i resultater kan oppstå på grunn av forskjeller mellom ruter inkludert antall observasjoner eller påvirkning av ukjente omstendigheter i markeder. (Jung & Fujii, 1976). Denne antagelsen kan godt drøftes i forbindelsen med funnene i den studien. For det første, må det legges oppmerksomhet til antatt seleksjonsbias i data, som begrenser nøyaktighet av resultater for februar- desember måneder i 2016. For det andre, kan økt andel av CE ekskludert Frankrike markedet fra 2015, som det mest elastiske segmentet ha påvirkning på resultater.

Figur 11. Priselastisitet per avgangsmåned med gjennomsnittsverdi, vist med fiolett linje og koeffisienter av liten signifikans, vist med blå punkter

## 7. Konkluderende bemerkninger

Med benyttelsen av unik markedsdata fra Hurtigruten, gjennomførte denne studien en pris analyse over tid samt funnet priselastisitetene på cruise rute mellom Bergen og Kirkenes over tid. Resultatene var drøftet i lys av det teoretiske rammeverket, som besto av økonomiske begreper og metoden som hedonisk prismodell, prisdiskriminering samt verdibasert prissetting og elastisitet. Med antagelsen for faste kostnader, var det funnet ut at pris oppfører seg dynamisk i forhold til etterspørselsnivå, preferanser og med hensyn til tid. Det viste seg at differensiert pris på lugartype er den mest stabile variabel gjennom alle sesonger.

I forbindelsen med forskningen var gjort en antagelse at sommer vær, altså ferisesong er et viktig faktor som bidrar til mer stabilt høysesong mønster gjennom årene. Antagelsen var støttet av regresjonsresultatene som viste en sterkere korrelasjon mellom avhengig og forklaringsvariabler i inkluderte måneder. I tillegg til regresjonsresultater var et ganske stabilt høysesong mønster observert på priselastisitetene som viste seg å være minst elastisk gjennom årene. Funnene kan også være sett i sammenheng med optimale verdier på bestilling som viste det er lønnsomt å gjøre en tidlig bestilling for avganger i høysesong, primært august måned.

Til slutt vil jeg konkludere at det viktigste bidraget med denne studien var i analysen over tid, gjennomført gjennom estimering modellen per avgangsmåned. Dette ga en ny perspektiv til å observere endringer i differensiert pris over tiden. Benyttelse av hedonisk prismodell var også en relativt ny tilnærming i forskning innenfor reiselivsnæringen. Oppdagelse av flere fordeler og begrensninger ved hedonisk prismodell kan bidra til metodens utbredelse i lignende forskningsområde. Det er viktig å påpeke noen begrensninger ved denne studien. For det første, kan flere faktorer, ikke inkluderte i modellen som skift i tilbud, konkurrerende pris og ulike eksterne faktorer påvirke prissetting. For det andre, kan prisstrategi fra den studien skille seg fra andre cruise ruter av Hurtigruten eller andre cruise bedrifter. Funnene fra den studien kan benyttes til videre forskning. For eksempel, kan det være interessant å undersøke virkning av konkurrerende pris og kostnader, også finne optimaliseringsløsning med hensyn på pris.
